Introduction to Parallel Computing (CMSC416 / CMSC818X)

Abhinav Bhatele, Department of Computer Science

Announcements

- Assignment 4 extra credit due on Dec 6
- Assignment 5 posted online due on Nov 23
 - Only for 818X students
 - 416 students: extra credit also due on Nov 23
- Quiz 3: due on Nov 19 11:59 pm

Abhinav Bhatele (CMSC416 / CMSC818X)

High-speed interconnection networks

- bandwidth networks
- The connections between nodes form different topologies
- Popular topologies:
 - Fat-tree: Charles Leiserson in 1985
 - Mesh and torus networks
 - Dragonfly networks

Abhinav Bhatele (CMSC416 / CMSC818X)

• Typically supercomputers and HPC clusters are connected by low latency and high

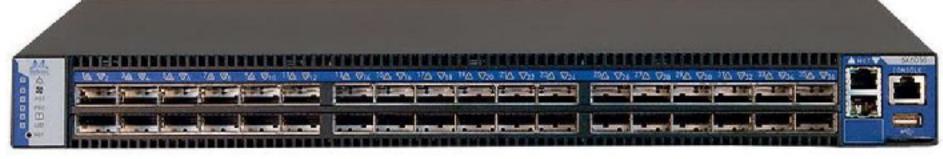

Network components

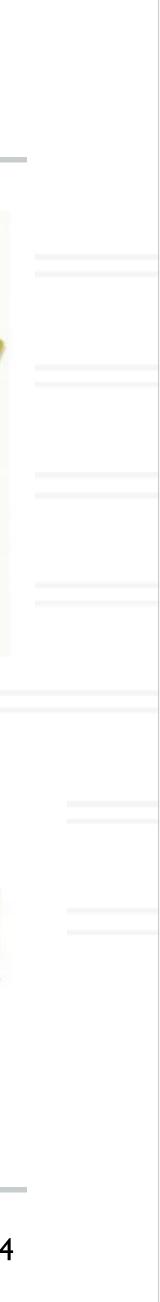

- Network interface controller or card
- Router or switch
- Network cables: copper or optical

Abhinav Bhatele (CMSC416 / CMSC818X)

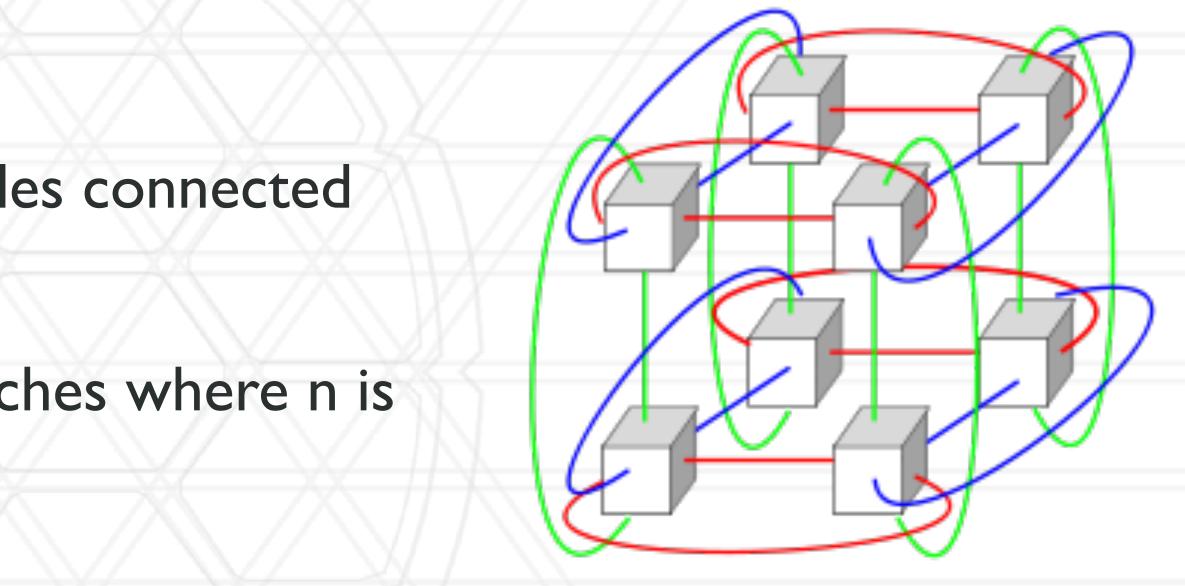

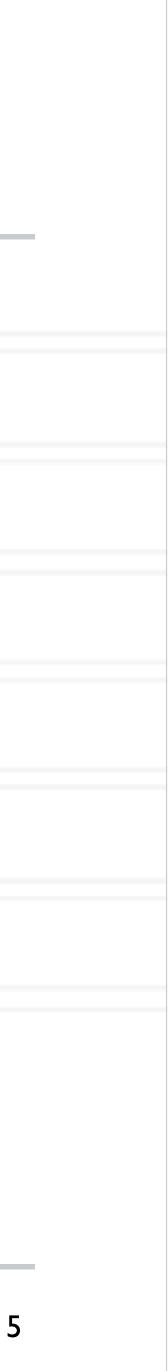

N-dimensional mesh / torus networks

- Each switch has a small number of nodes connected to it (typically 1)
- Each switch has direct links to 2n switches where n is the number of dimensions
- Torus = wraparound links
- Examples: IBM Blue Gene, Cray X* machines

Abhinav Bhatele (CMSC416 / CMSC818X)

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

Abhinav Bhatele (CMSC416 / CMSC818X)

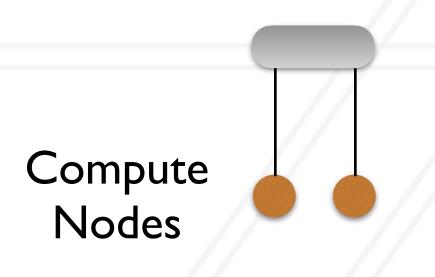

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

Abhinav Bhatele (CMSC416 / CMSC818X)

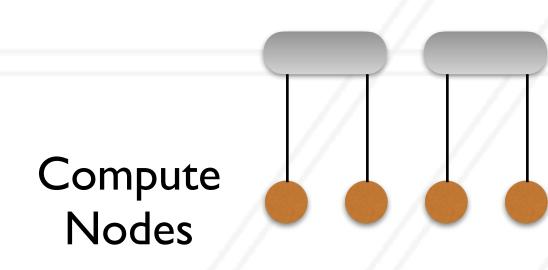

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

Abhinav Bhatele (CMSC416 / CMSC818X)

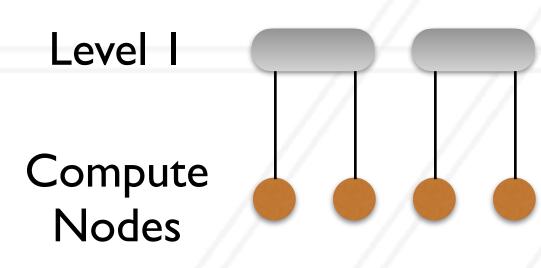

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

Abhinav Bhatele (CMSC416 / CMSC818X)

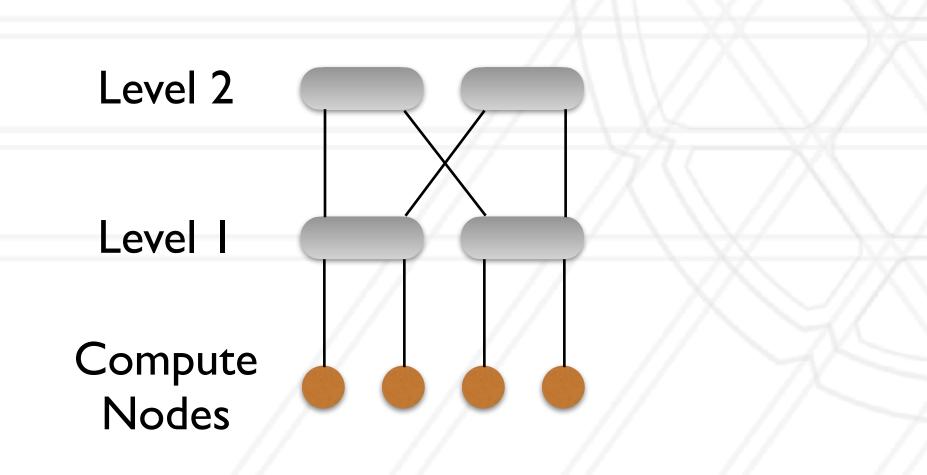

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

Abhinav Bhatele (CMSC416 / CMSC818X)

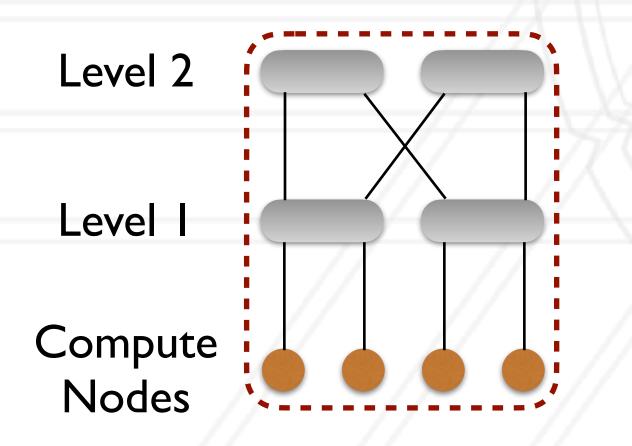

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

Abhinav Bhatele (CMSC416 / CMSC818X)

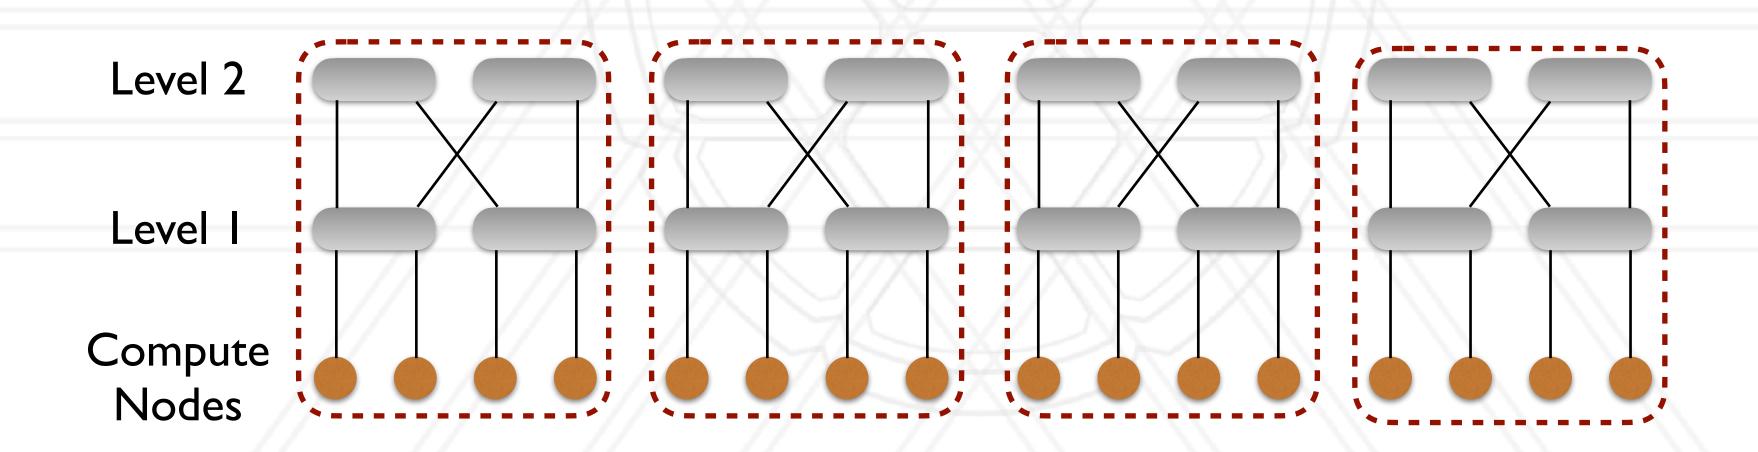

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

Abhinav Bhatele (CMSC416 / CMSC818X)

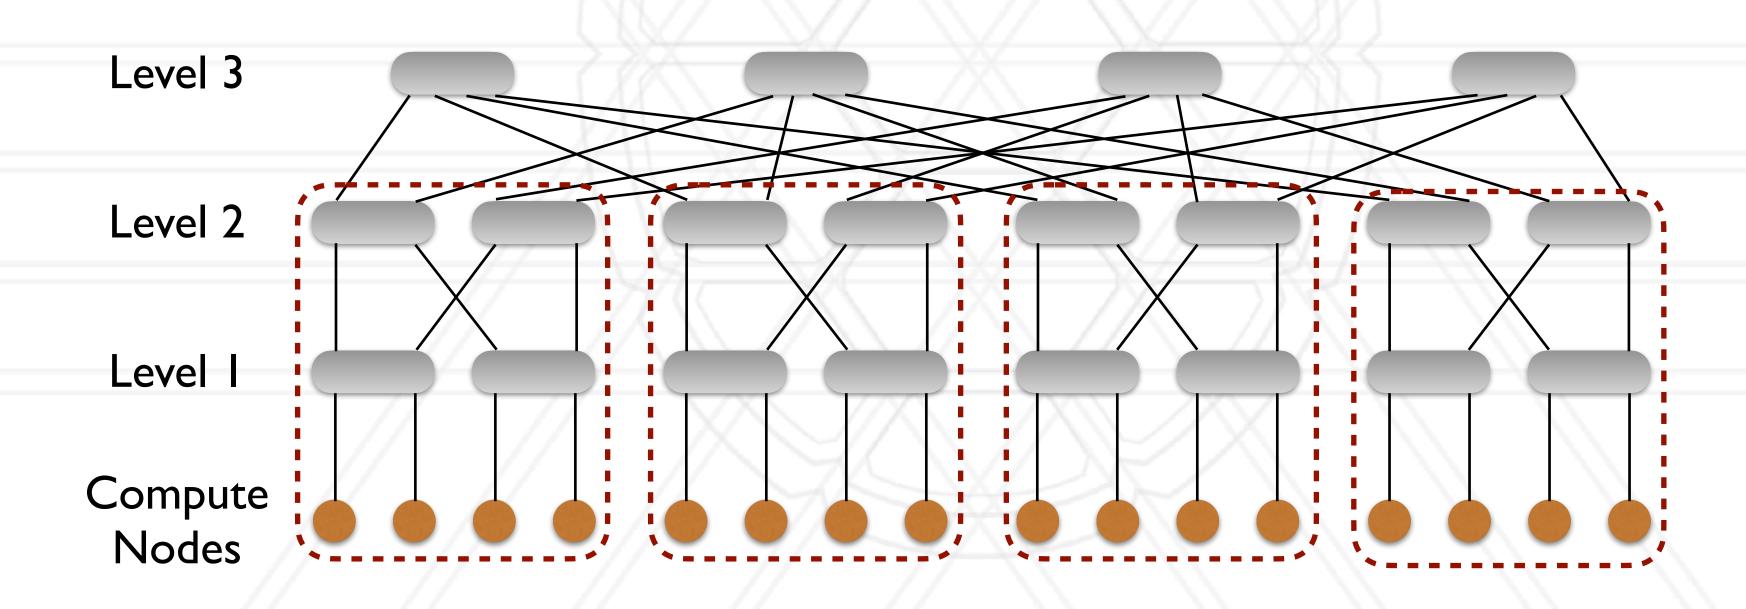

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

Abhinav Bhatele (CMSC416 / CMSC818X)

- Router radix = k, Number of nodes on each router = k/2
- A pod is a group of k/2 switches, Max. number of pods = k

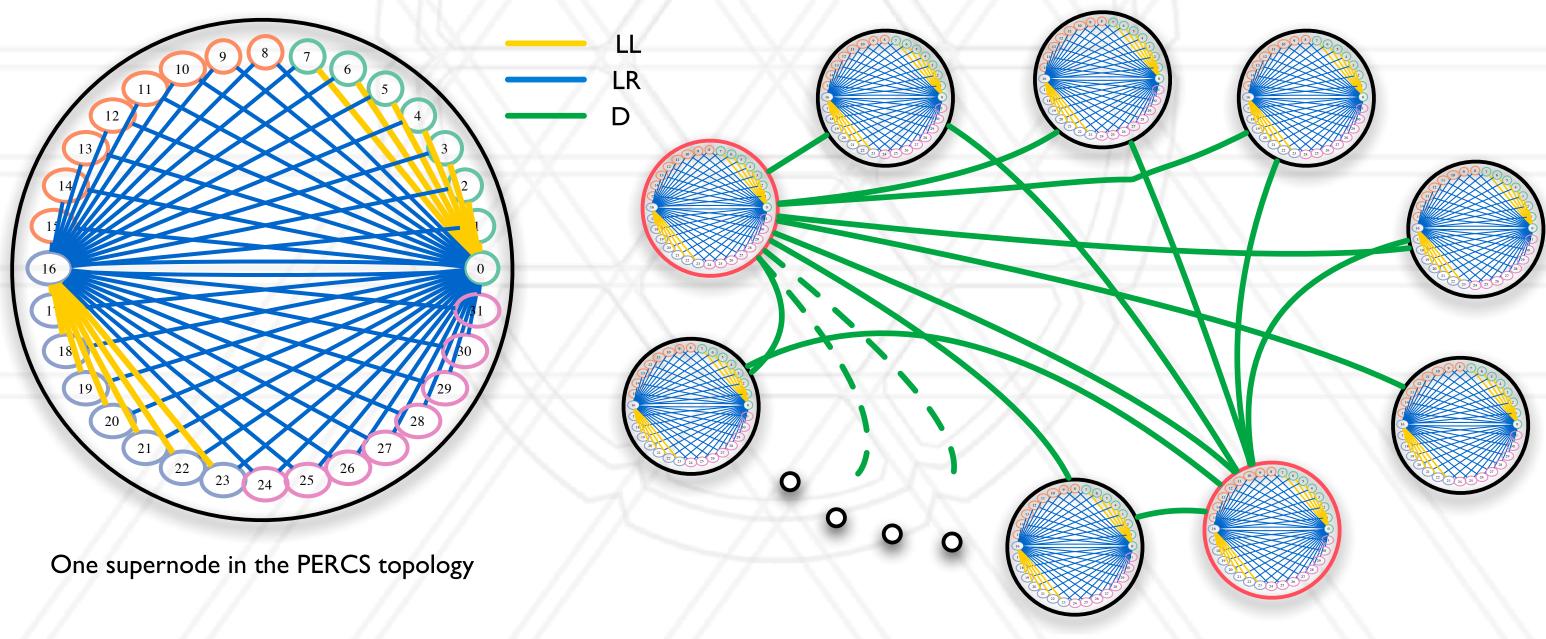

Abhinav Bhatele (CMSC416 / CMSC818X)

Dragonfly network

- Two-level hierarchical network using high-radix routers
- Low network diameter

Abhinav Bhatele (CMSC416 / CMSC818X)

Abhinav Bhatele (CMSC416 / CMSC818X)

- Sharing refers to network flows of different programs using the same hardware resources: links, switches
- When multiple programs communicate on the network, they all suffer from congestion on shared links

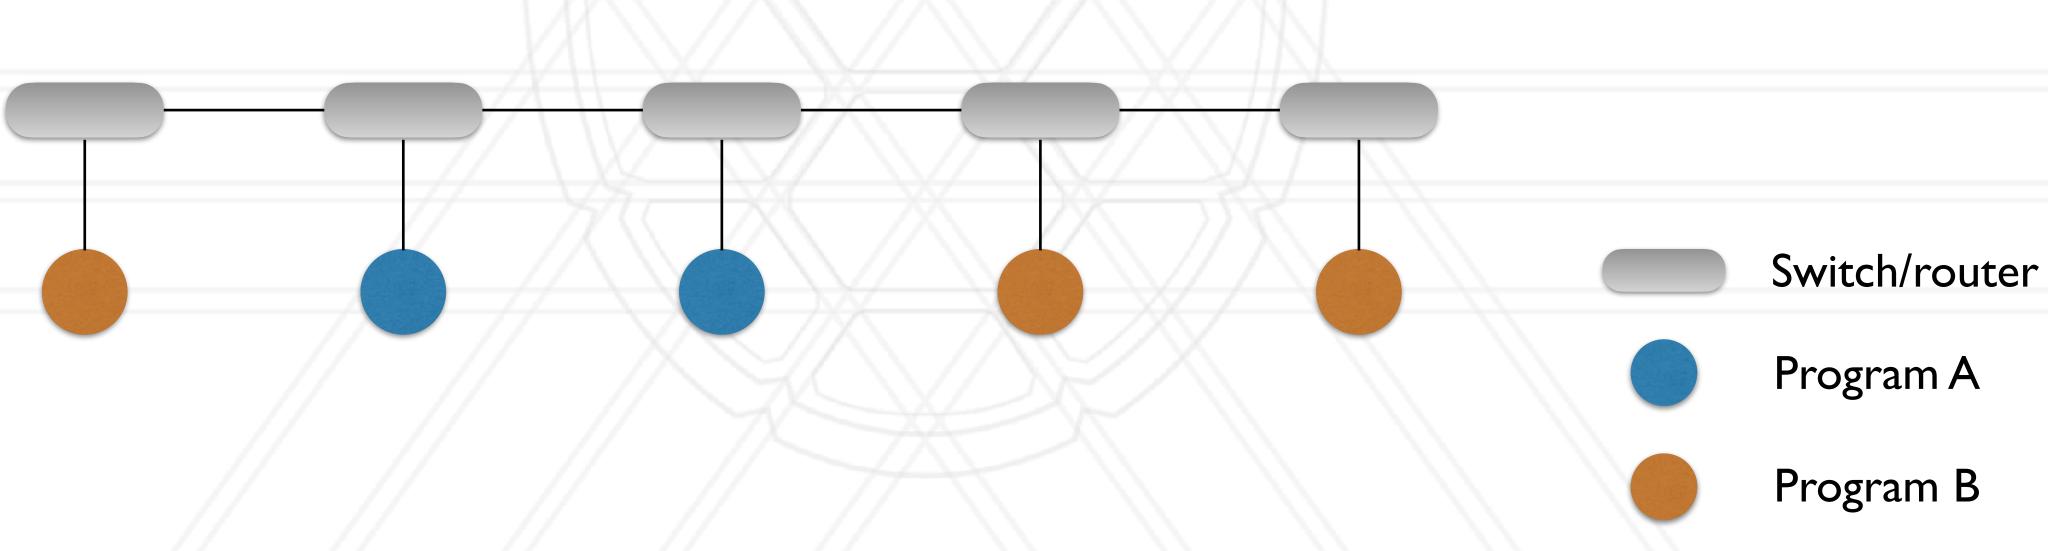

Abhinav Bhatele (CMSC416 / CMSC818X)

- Sharing refers to network flows of different programs using the same hardware resources: links, switches
- When multiple programs communicate on the network, they all suffer from congestion on shared links

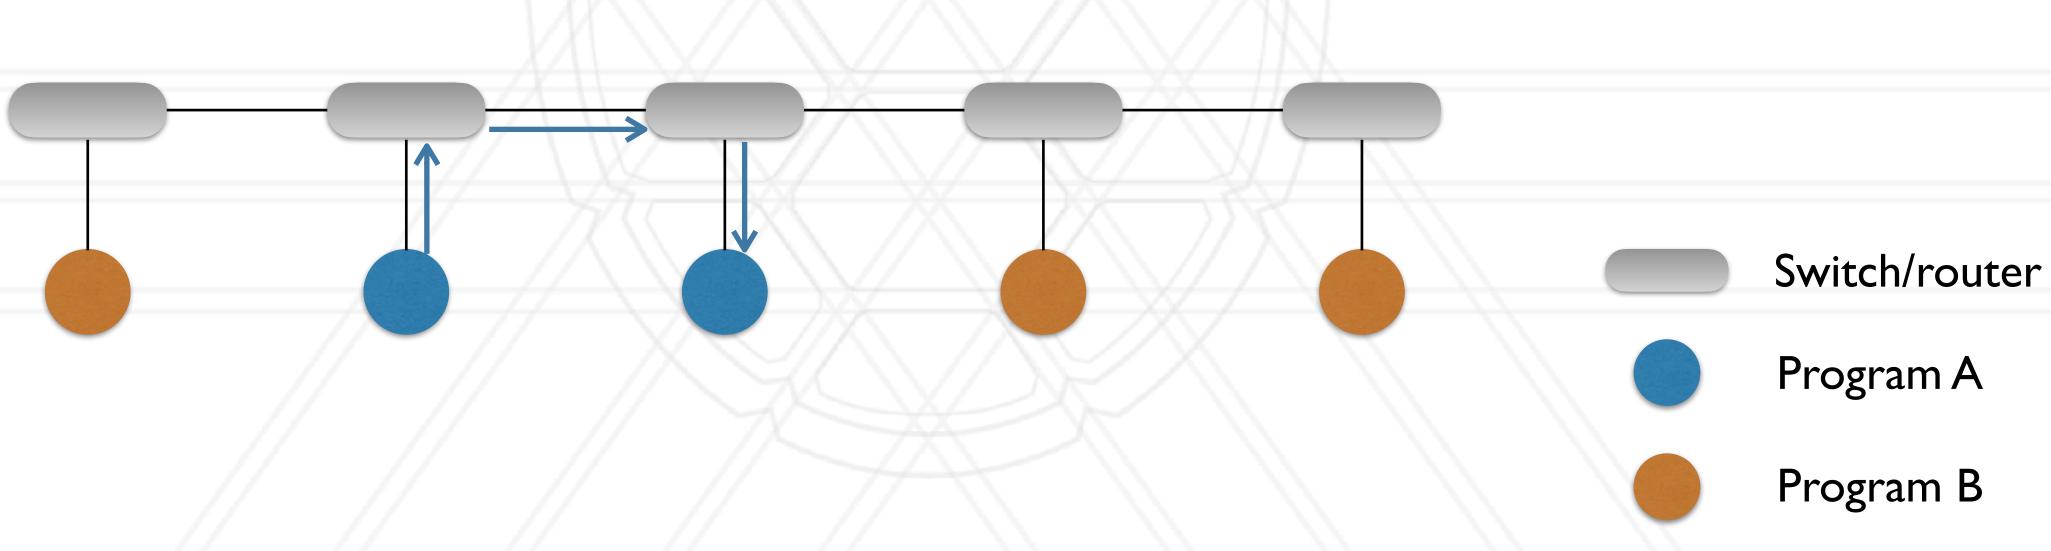

Abhinav Bhatele (CMSC416 / CMSC818X)

- Sharing refers to network flows of different programs using the same hardware resources: links, switches
- When multiple programs communicate on the network, they all suffer from congestion on shared links

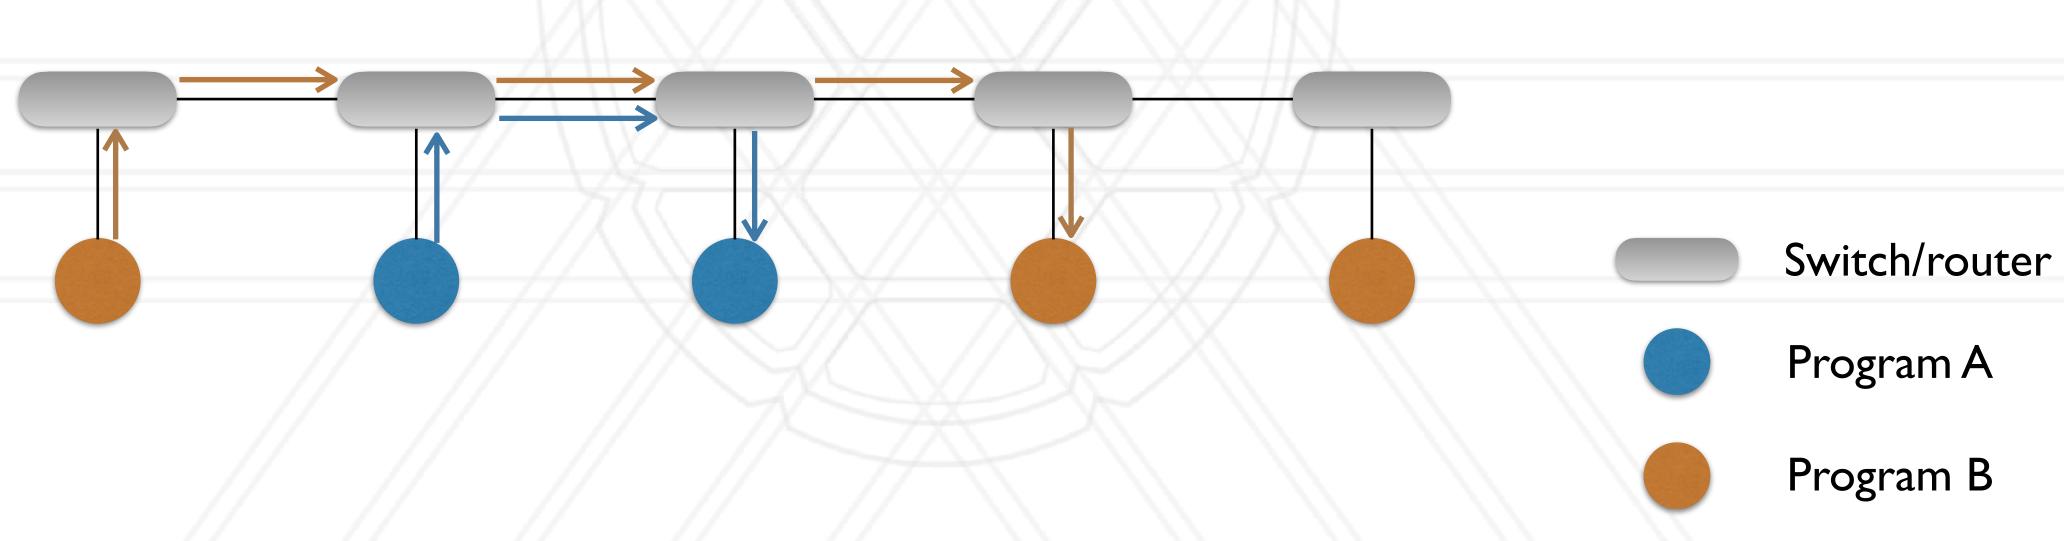

Abhinav Bhatele (CMSC416 / CMSC818X)

- Sharing refers to network flows of different programs using the same hardware resources: links, switches
- When multiple programs communicate on the network, they all suffer from congestion on shared links

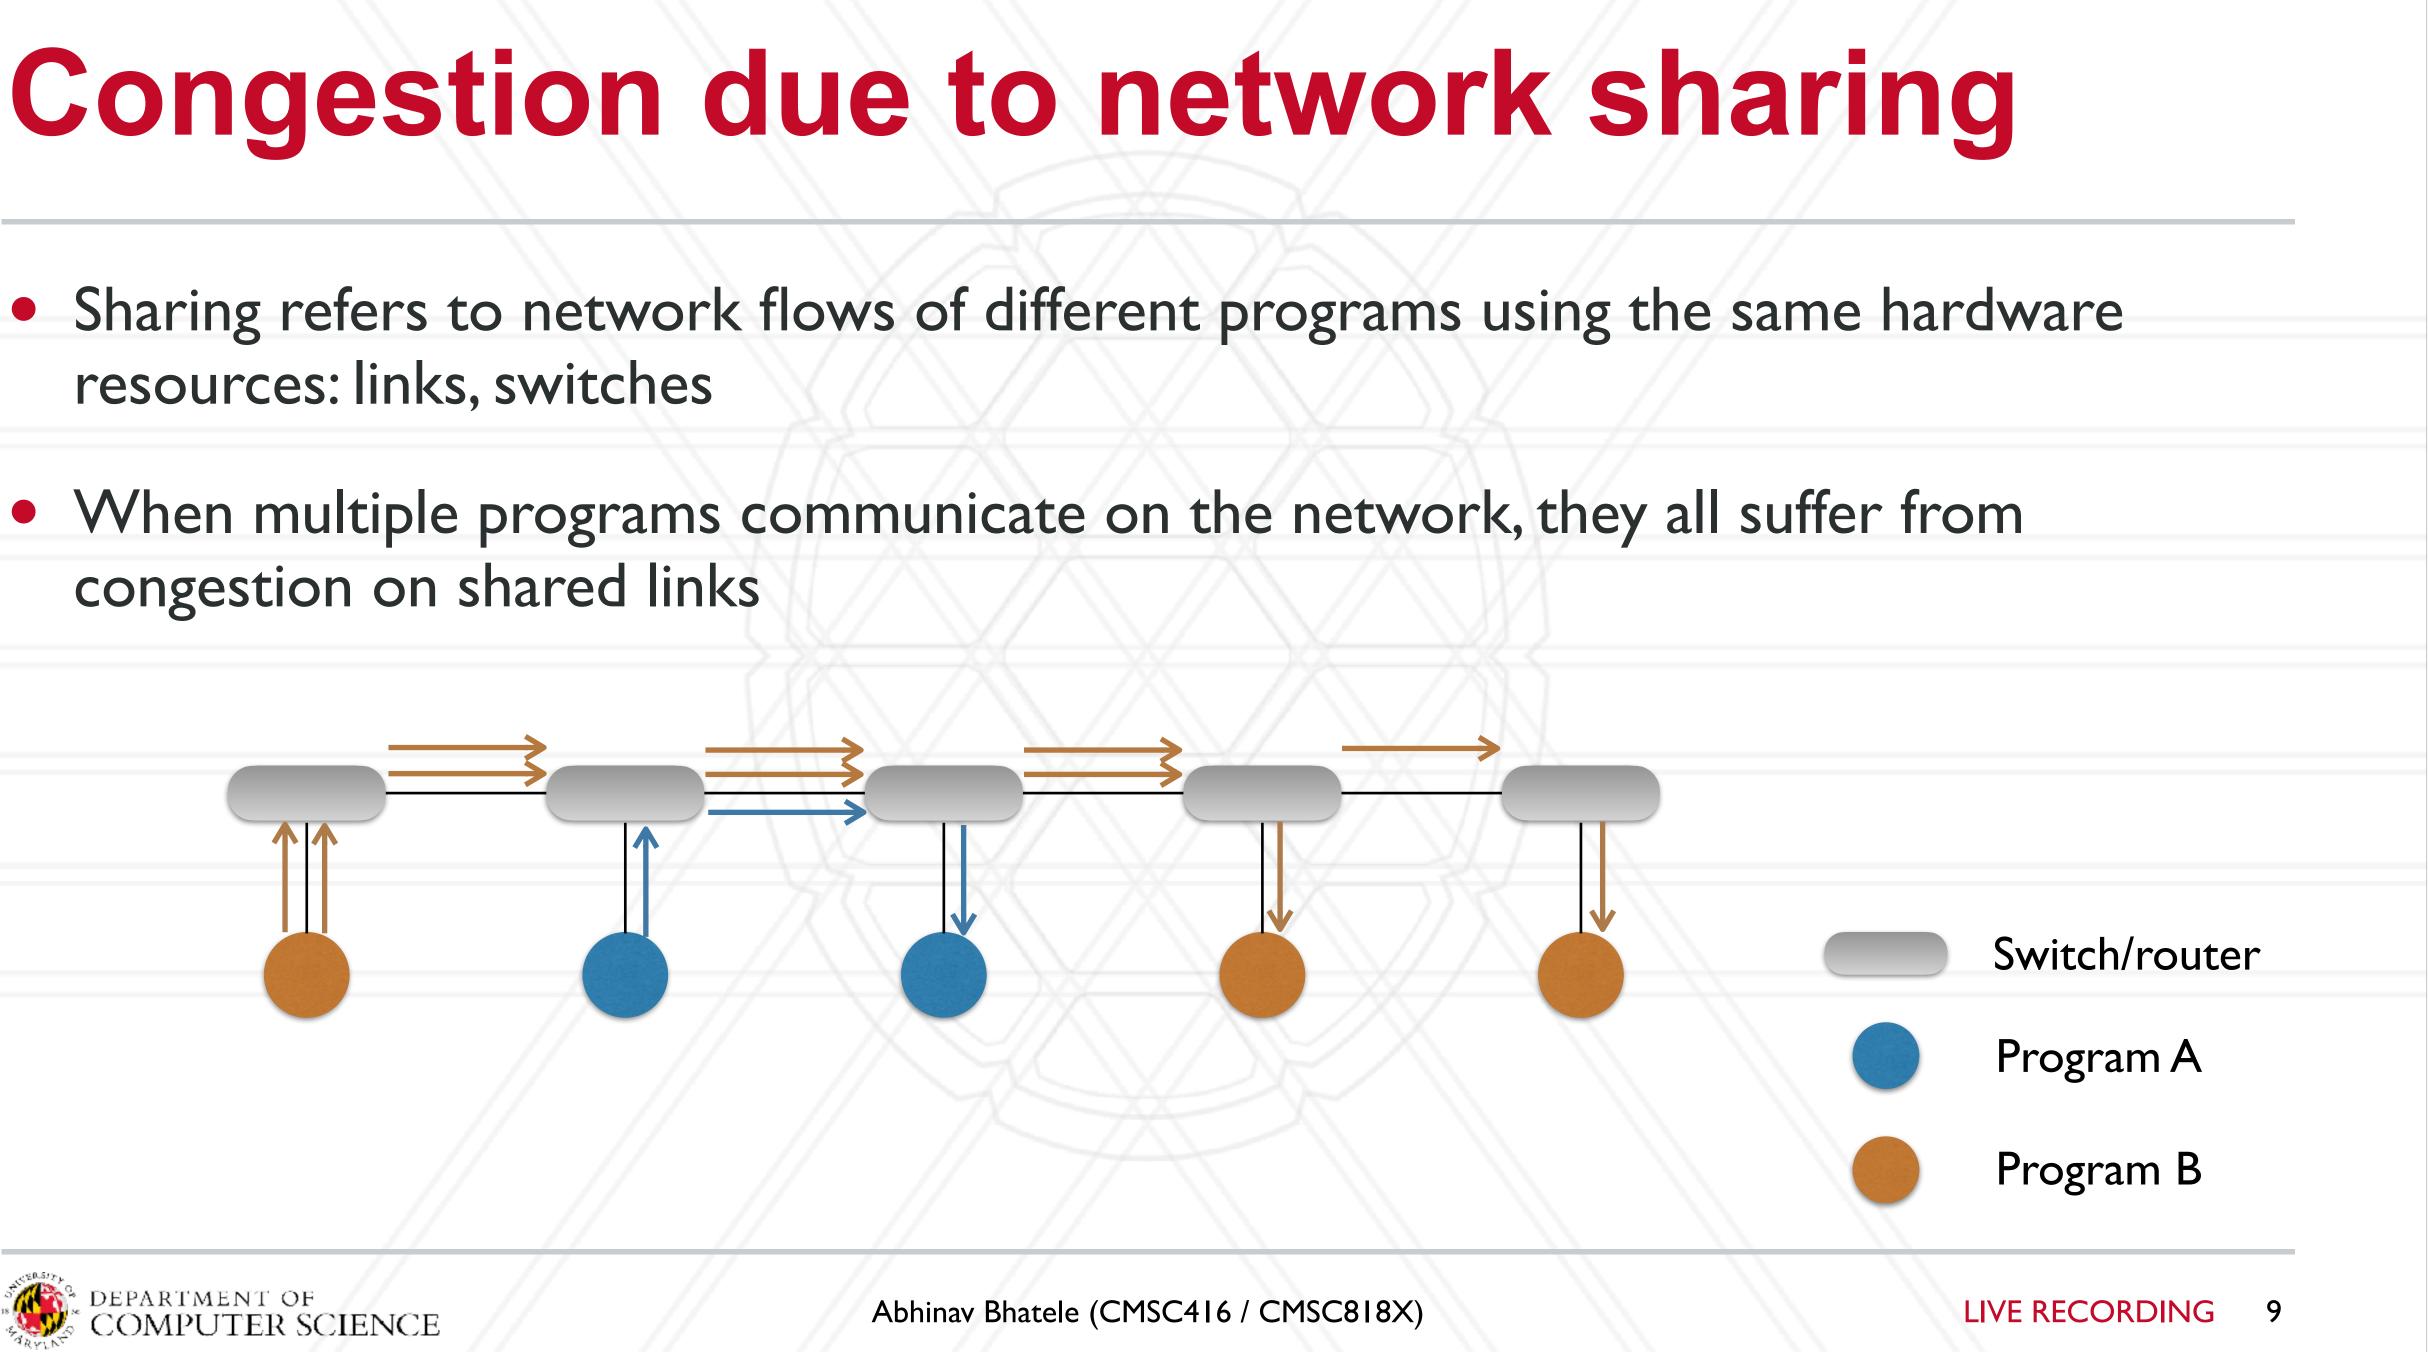

Abhinav Bhatele (CMSC416 / CMSC818X)

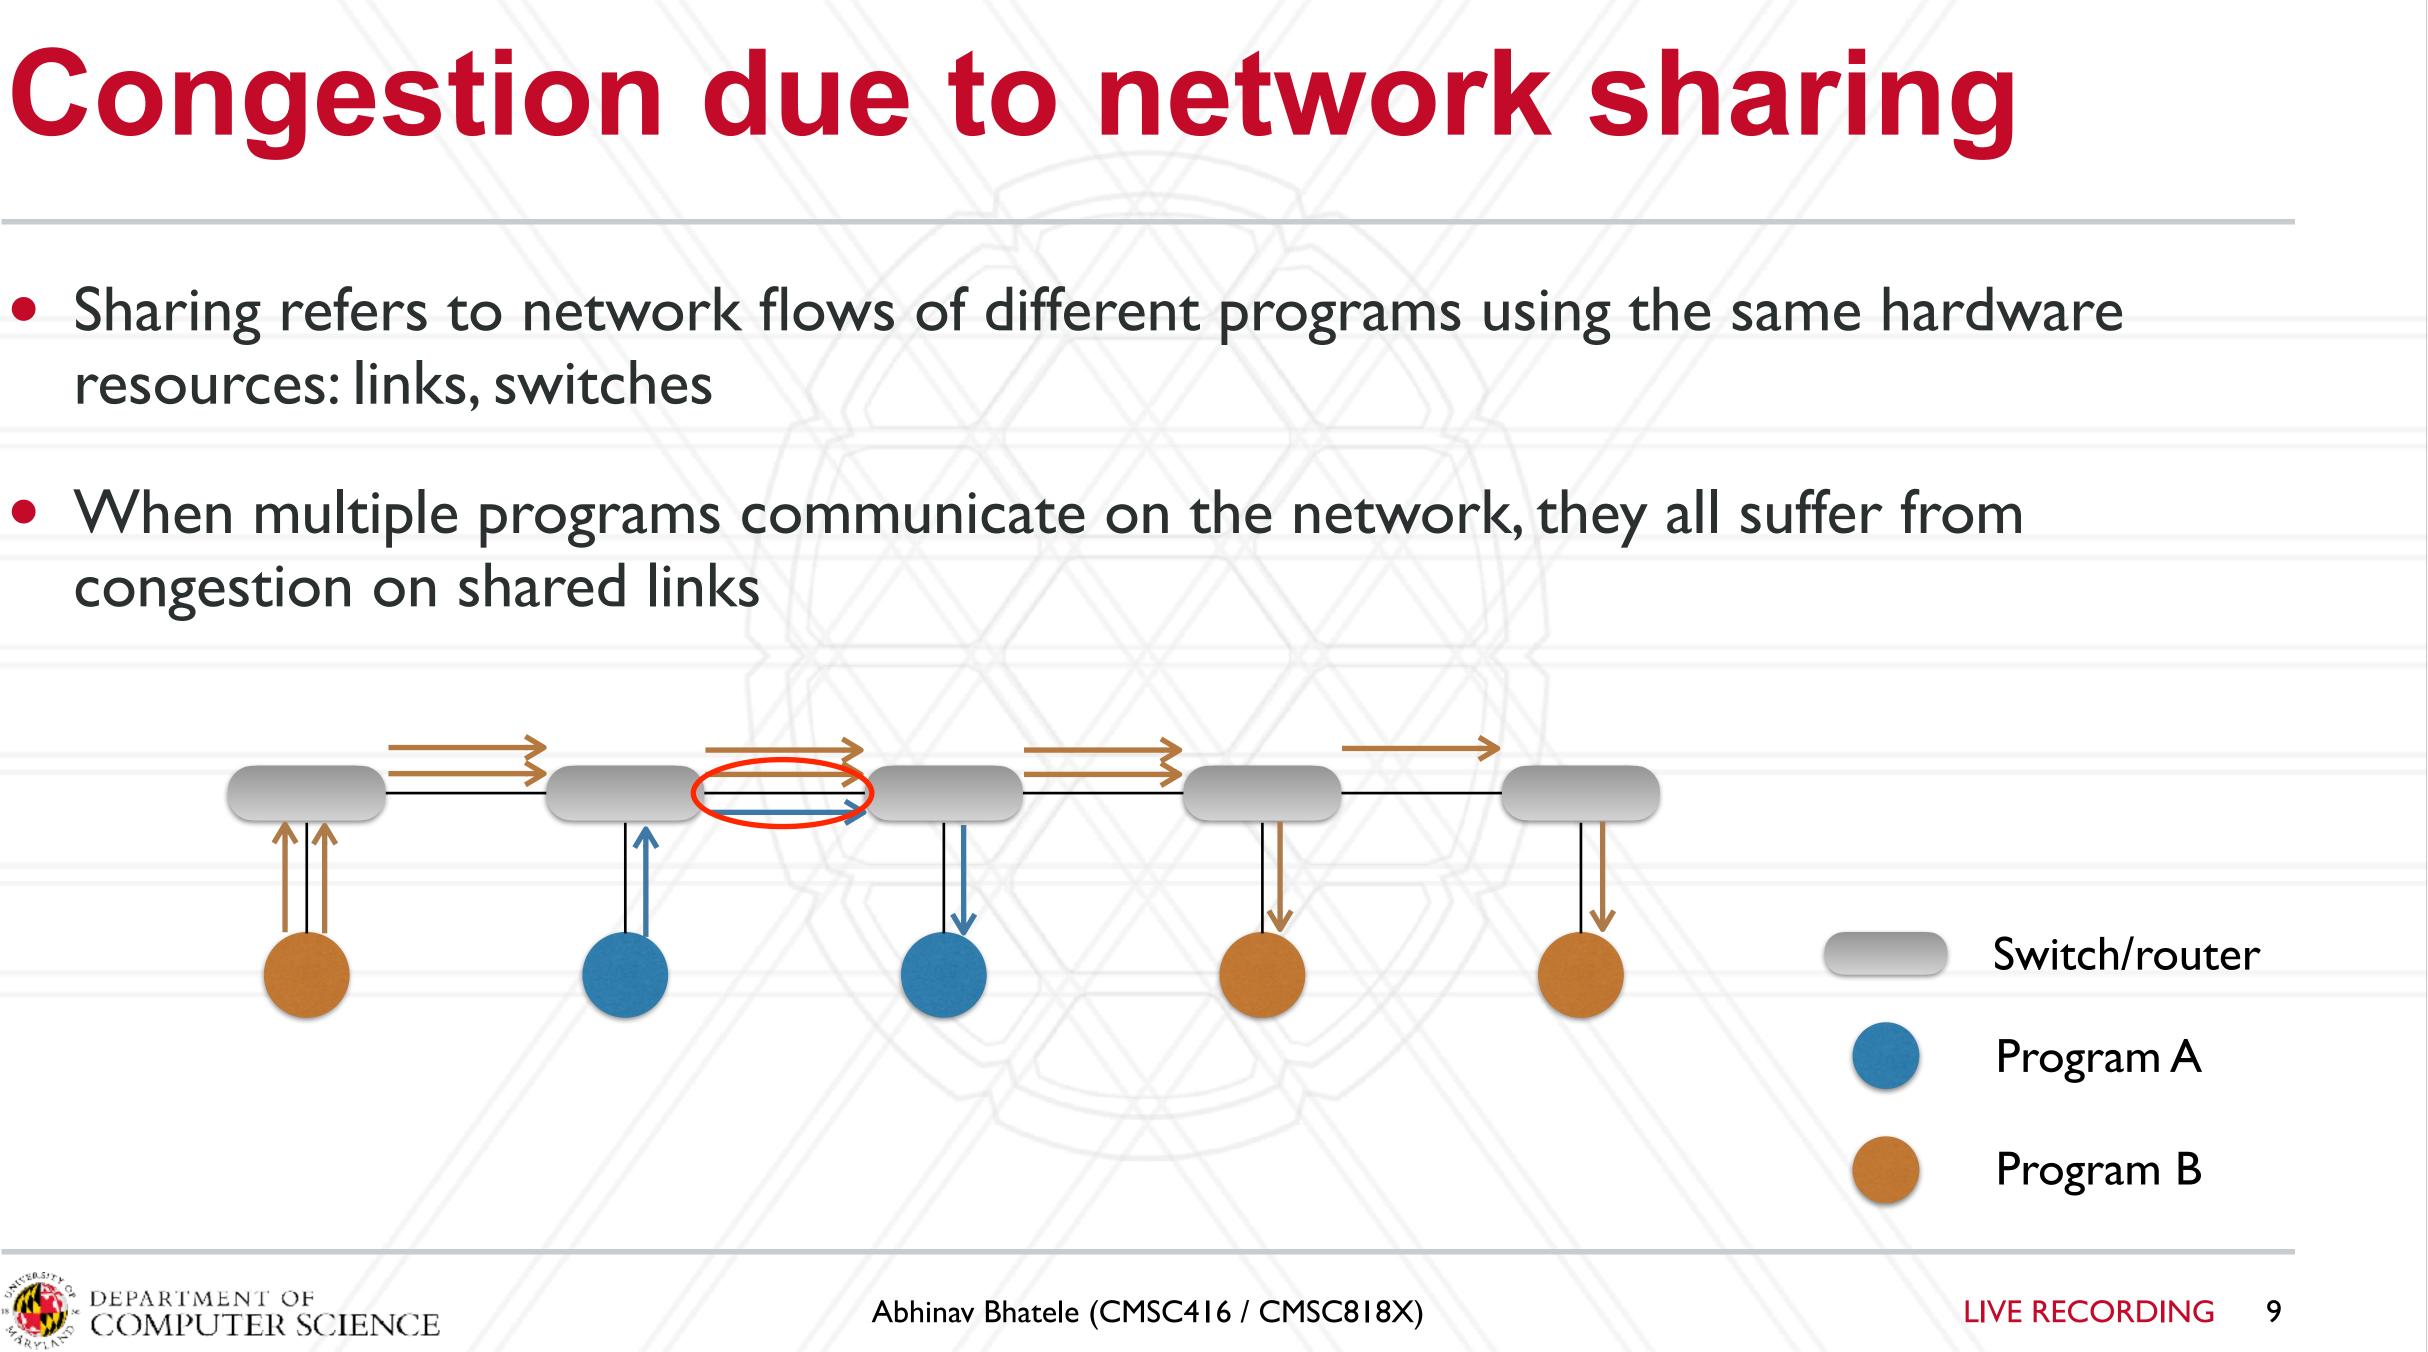

- resources: links, switches
- congestion on shared links

- resources: links, switches
- congestion on shared links

Routing algorithm

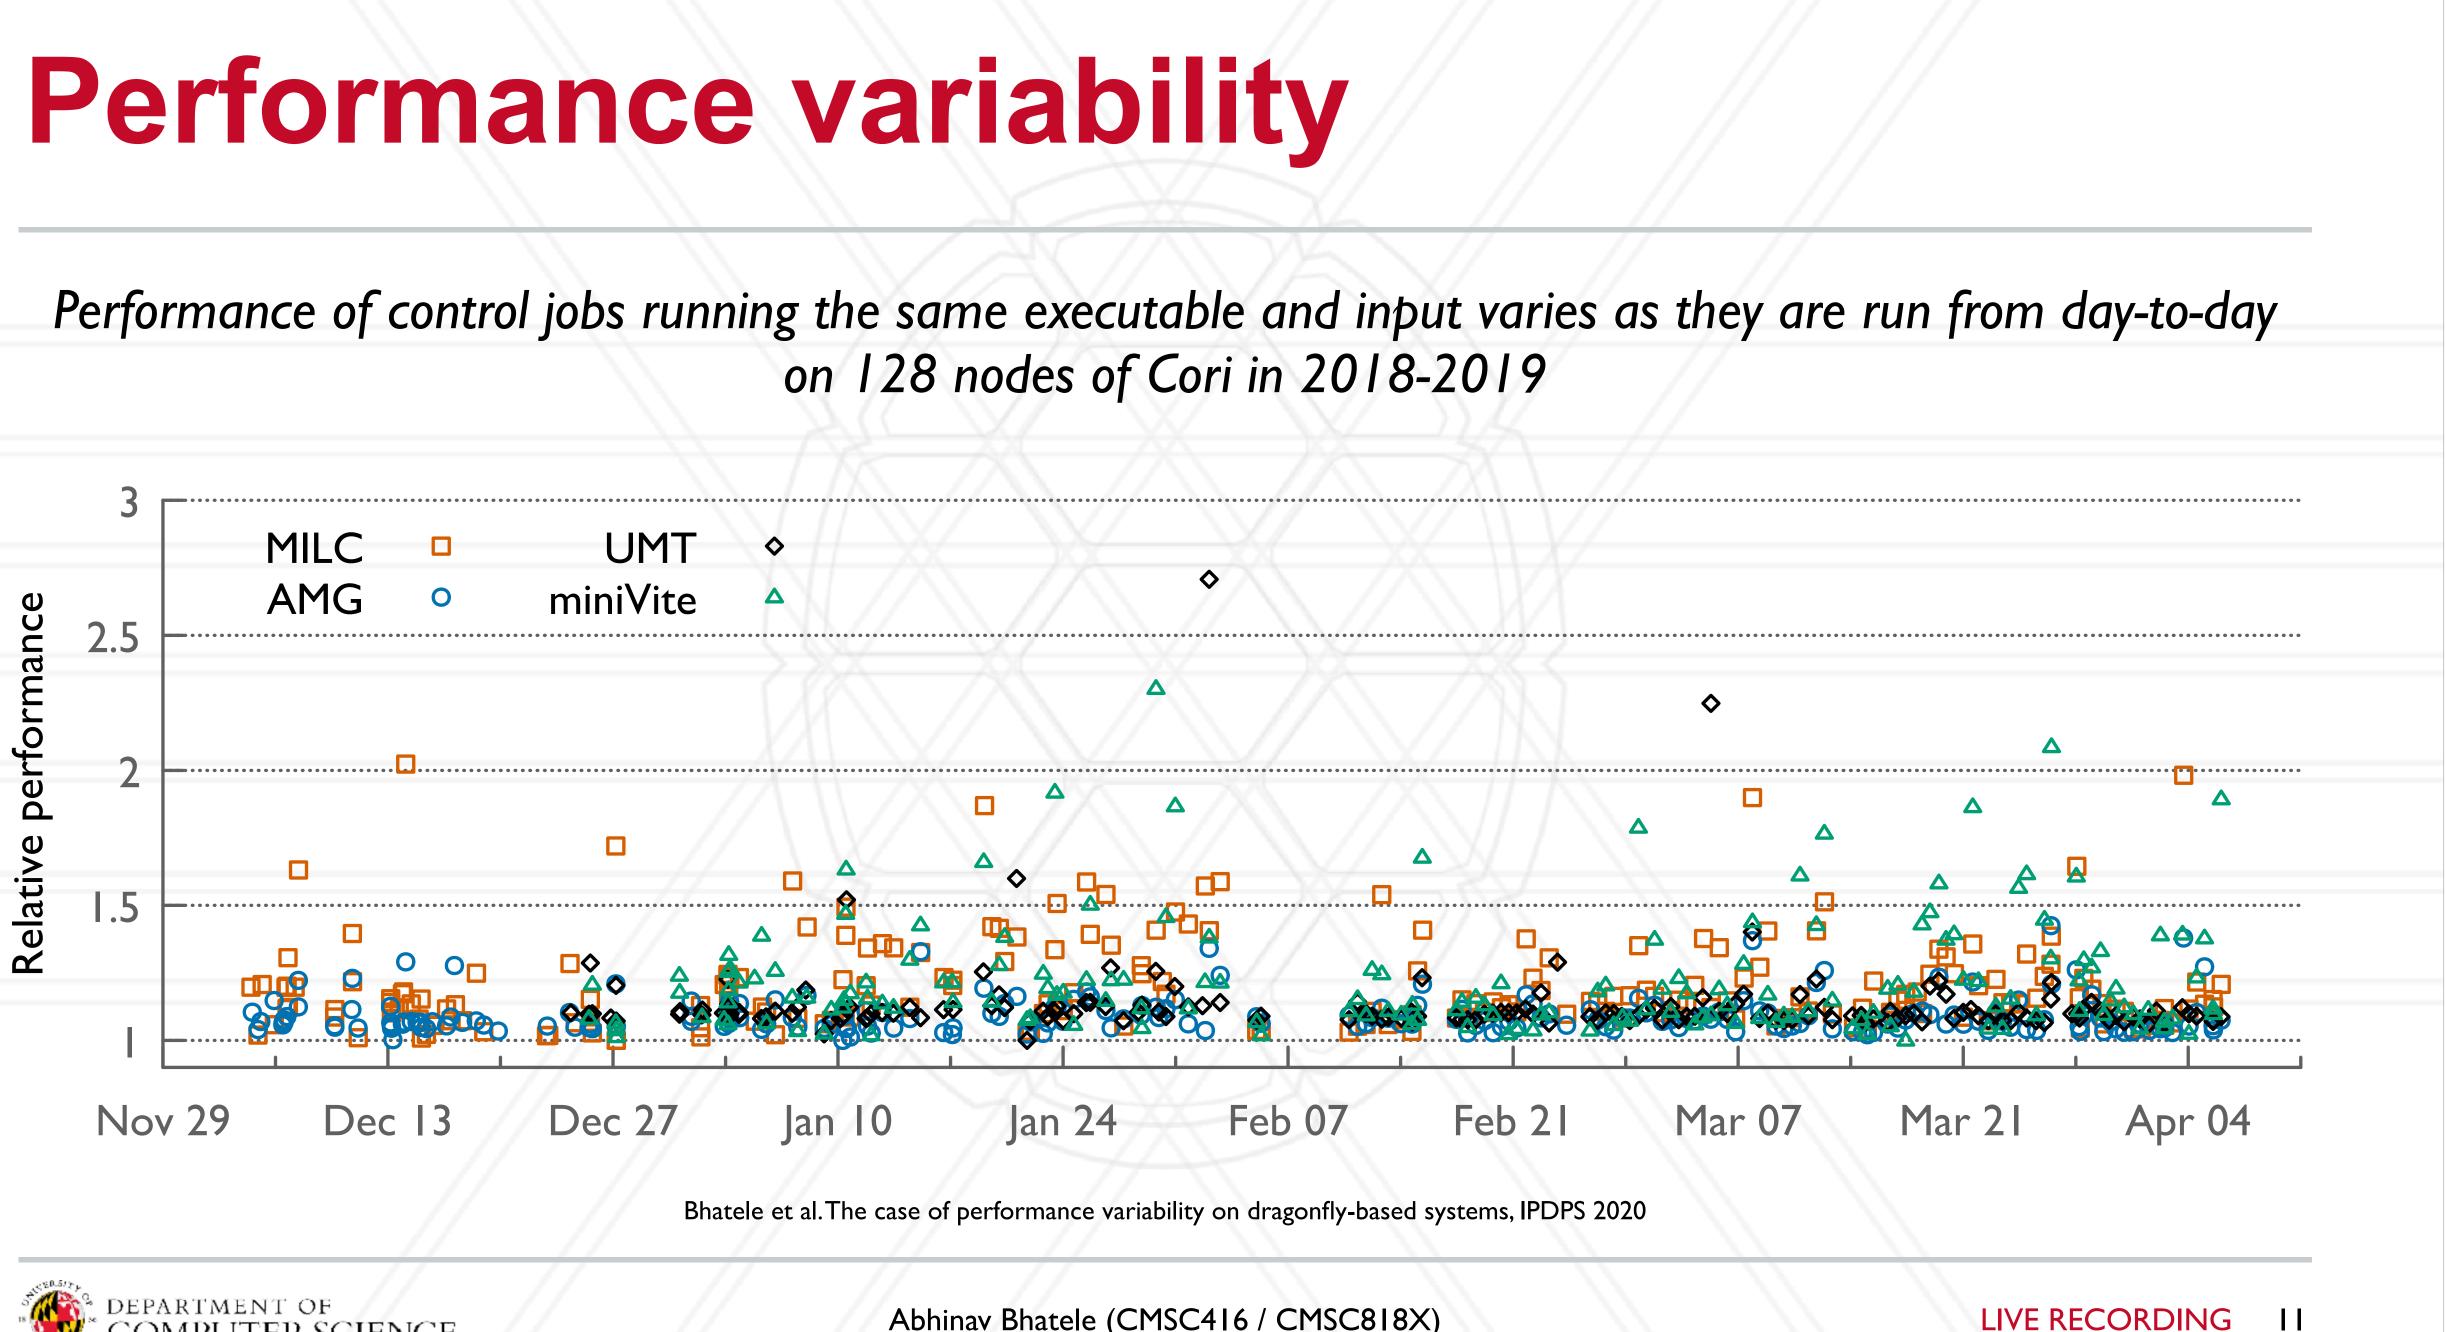

- Decides how a packet is routed between a source and destination switch
- Static routing: each router is pre-programmed with a routing table
 - Can change it at boot time
- Dynamic routing: routing can change at runtime
- Adaptive routing: adapts to network congestion

Abhinav Bhatele (CMSC416 / CMSC818X)

on 128 nodes of Cori in 2018-2019

Abhinav Bhatele (CMSC416 / CMSC818X)

Performance variability due to congestion

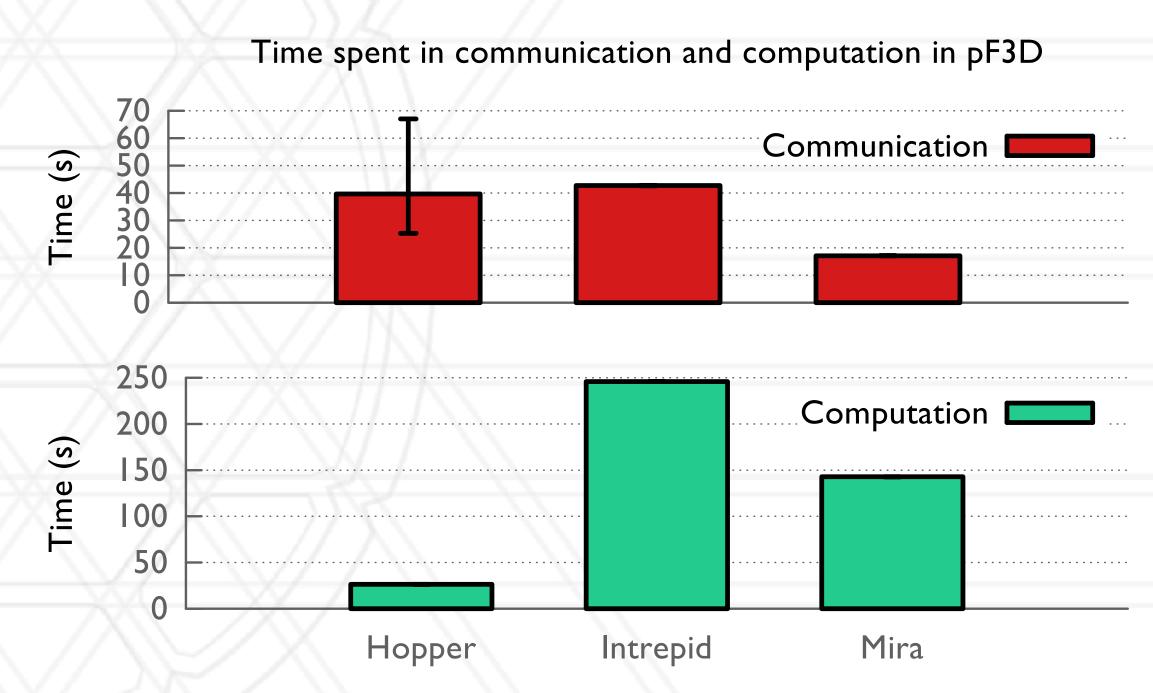

No variability in computation time

- All of the variability can be attributed to communication performance
- Factors:
 - Placement of jobs
 - Contention for network resources

Bhatele et al. http://www.cs.umd.edu/~bhatele/pubs/pdf/2013/sc2013a.pdf

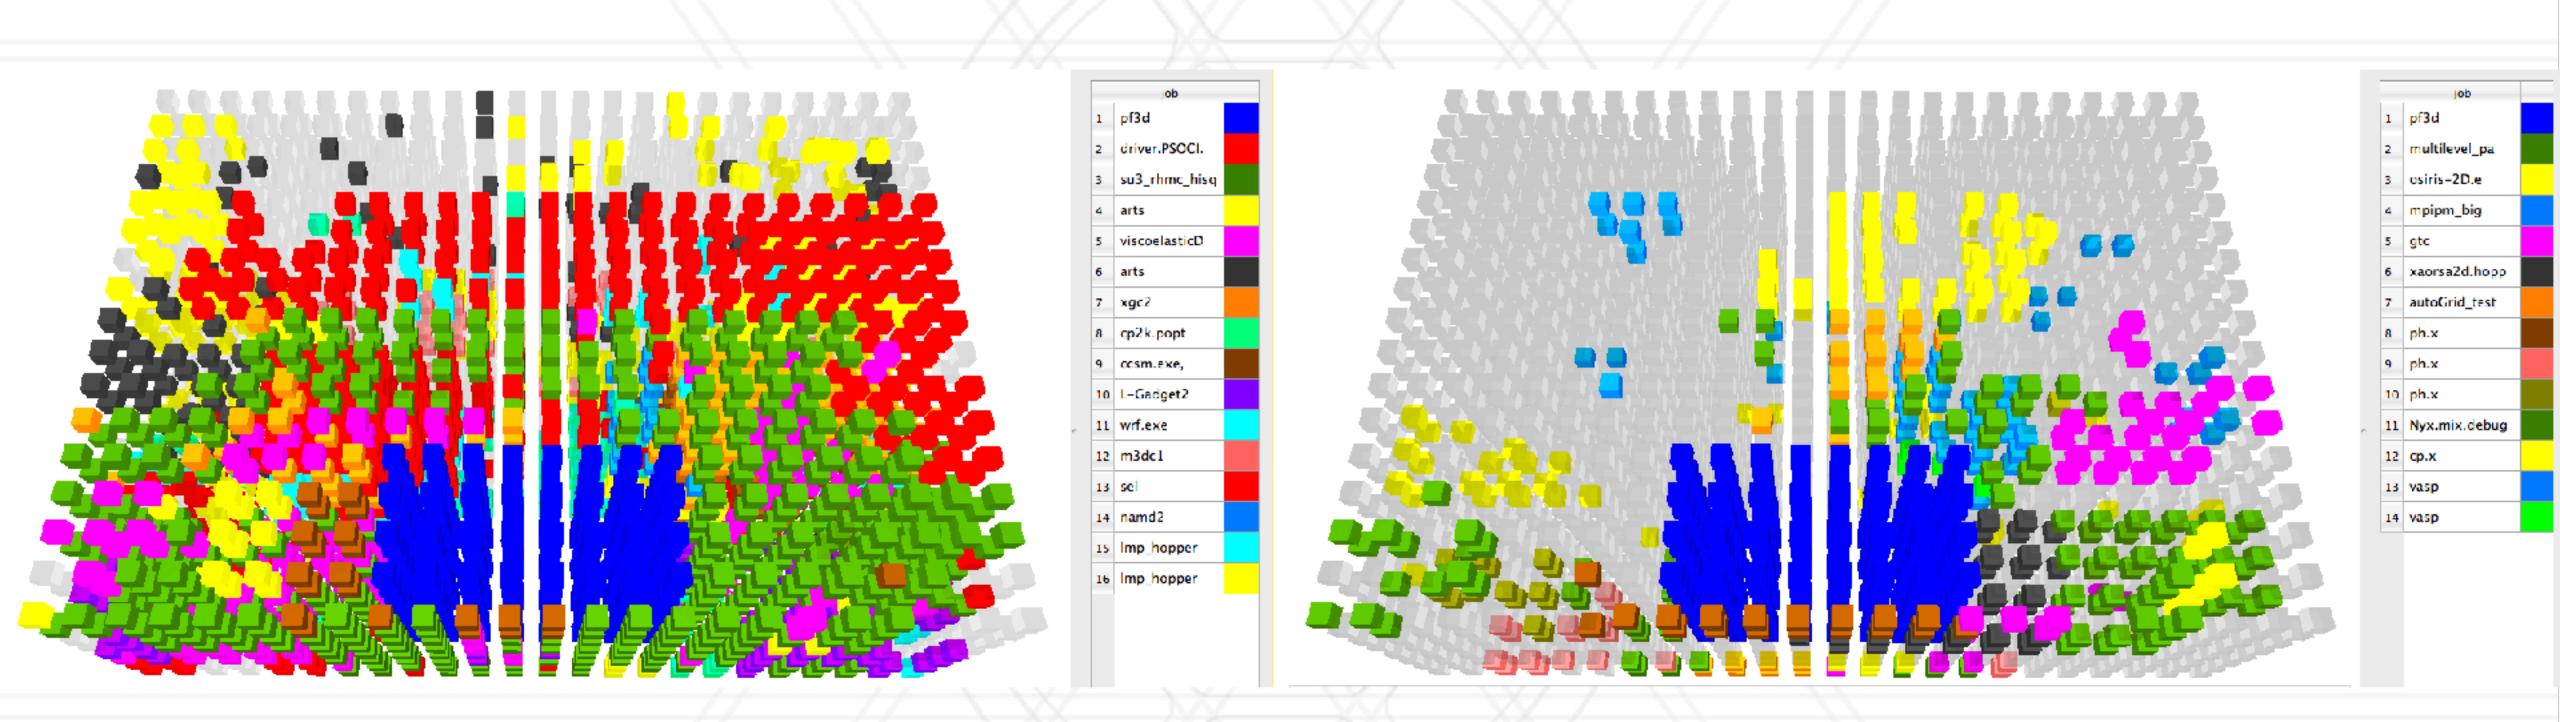

Abhinav Bhatele (CMSC416 / CMSC818X)

Abhinav Bhatele (CMSC416 / CMSC818X)

April 16

Impact of other jobs

April II MILC job in green

Abhinav Bhatele (CMSC416 / CMSC818X)

April 16 25% higher messaging rate

Different approaches to mitigating congestion

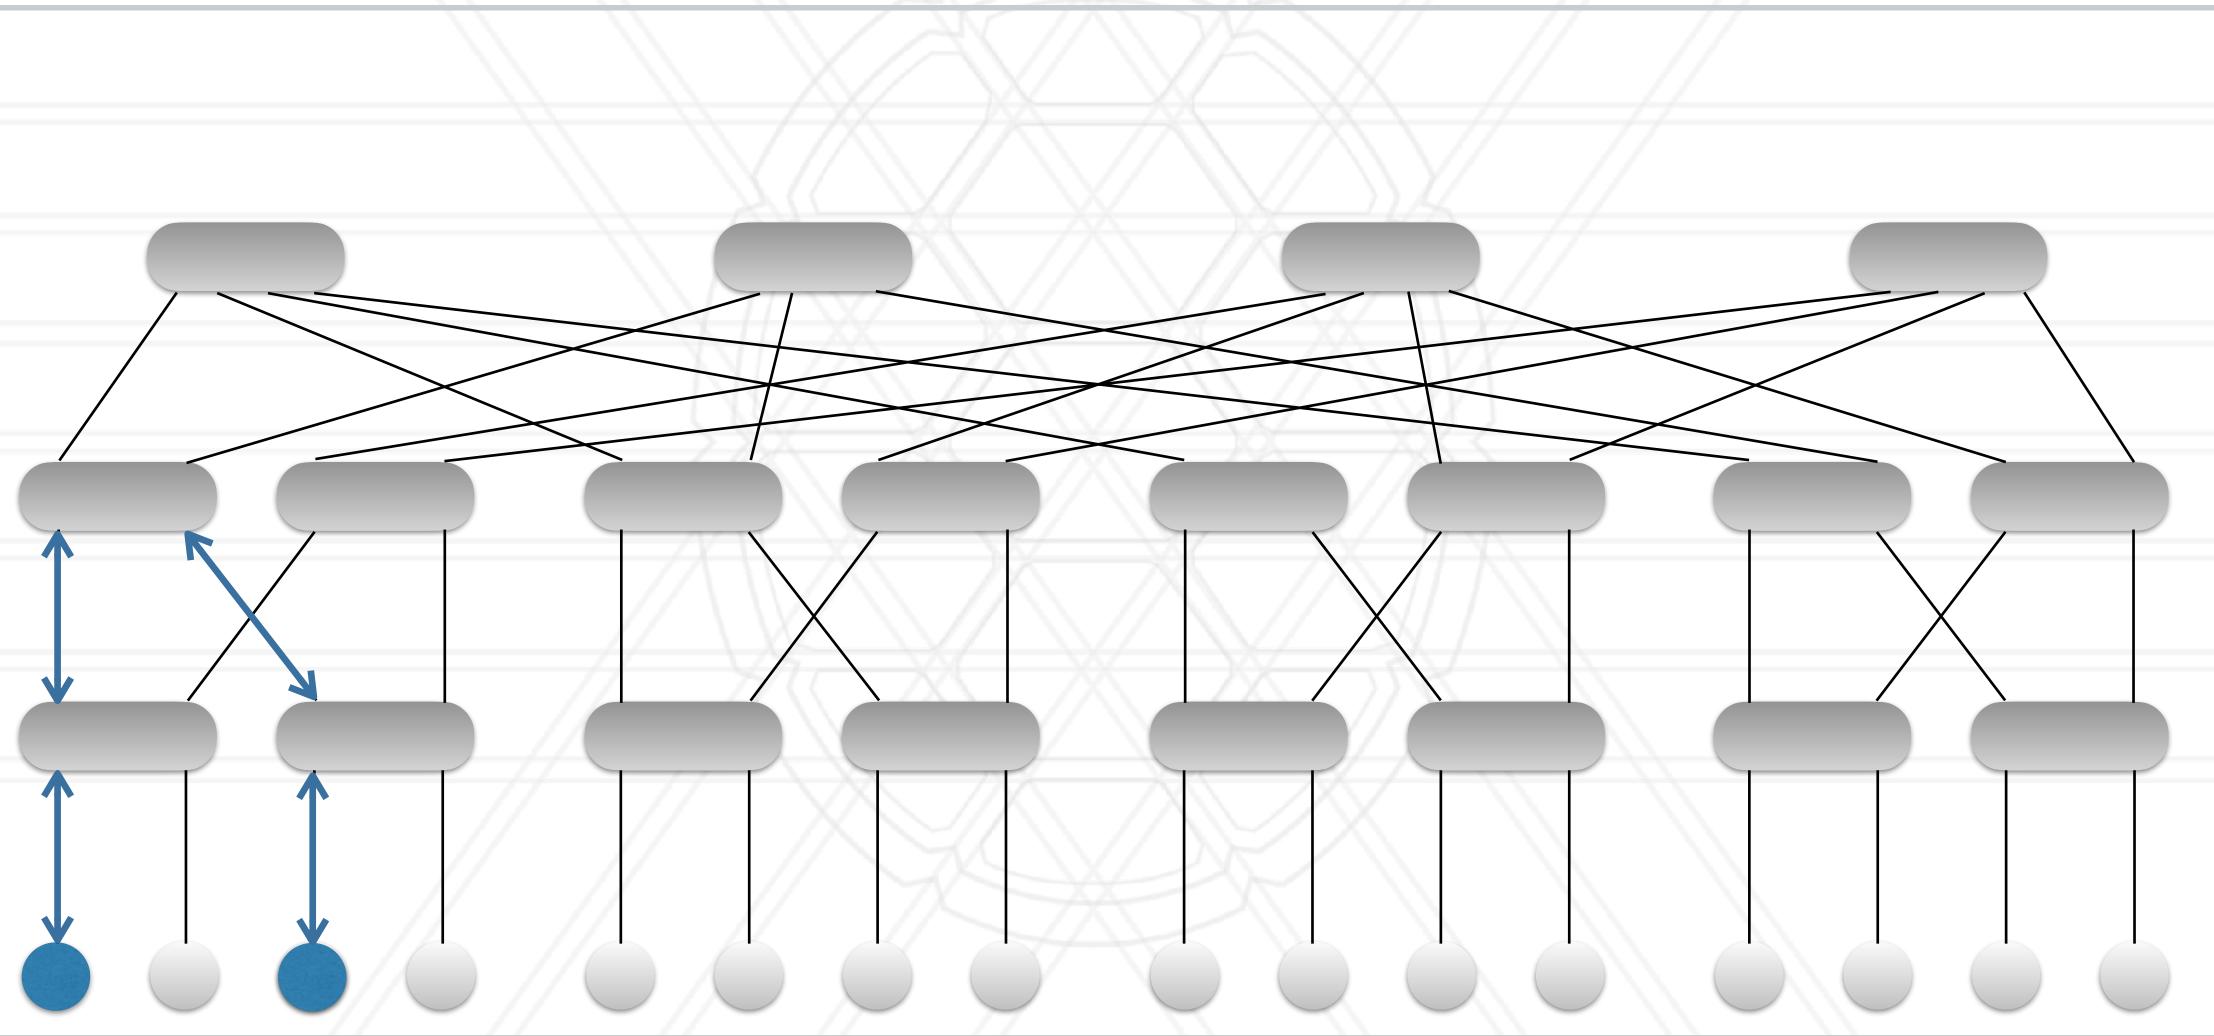

- Network topology aware node allocation
- Congestion or network flow aware adaptive routing
- nodes

Abhinav Bhatele (CMSC416 / CMSC818X)

• Within a job: network topology aware mapping of processes or chares to allocated

Solution: allocate nodes in a manner that prevents sharing of links by multiple jobs while maintaining high utilization

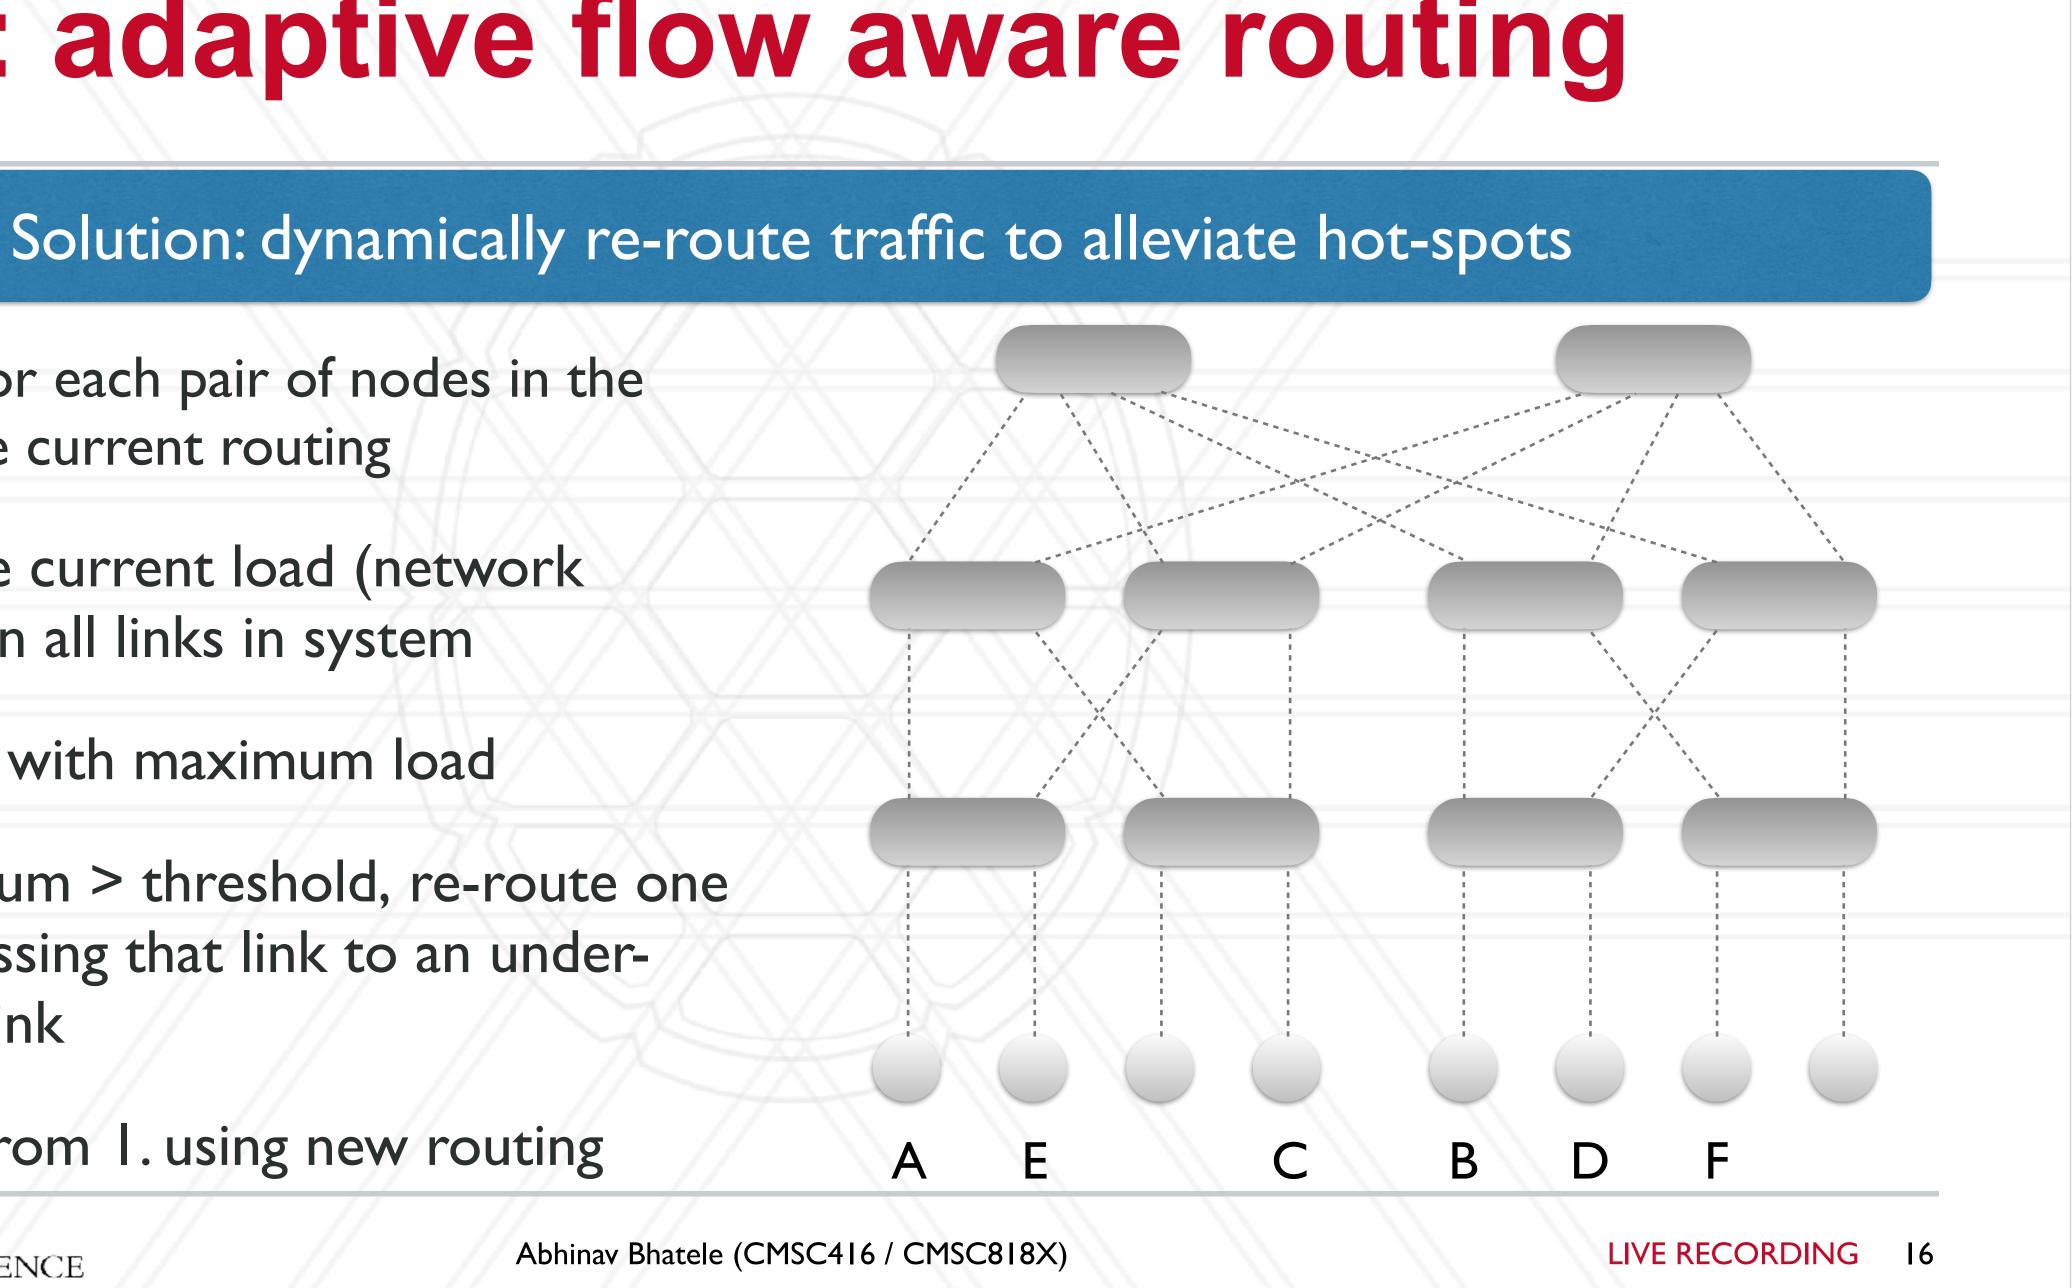

Abhinav Bhatele (CMSC416 / CMSC818X)

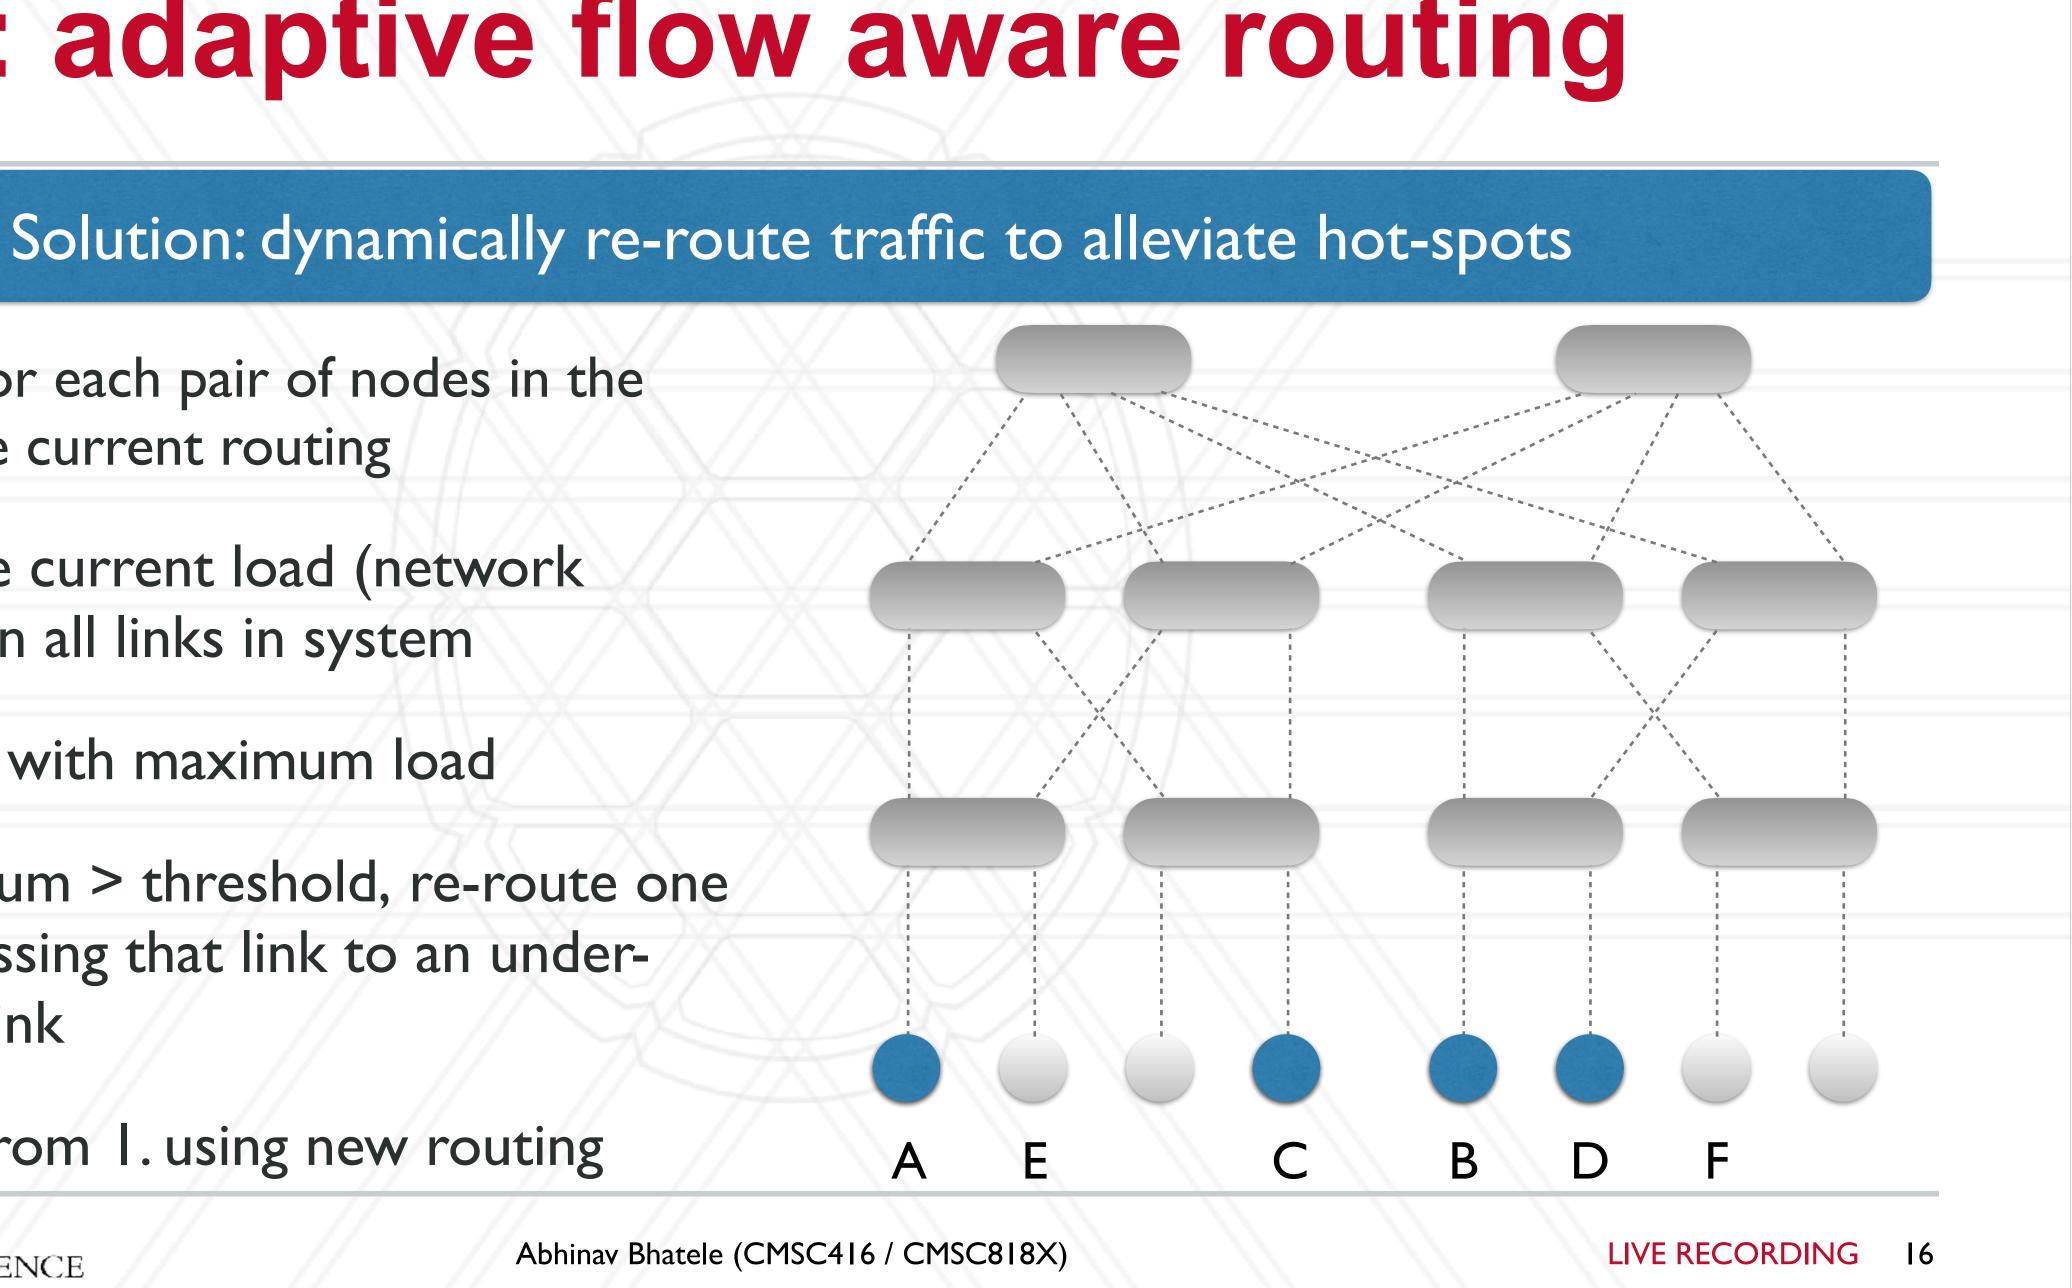

- I. Calculate current load (network traffic) on all links in system
- 2. Find link with maximum load
- 3. If maximum > threshold, re-route one flow crossing that link to an underutilized link
- 4. Repeat from 1. using new routing

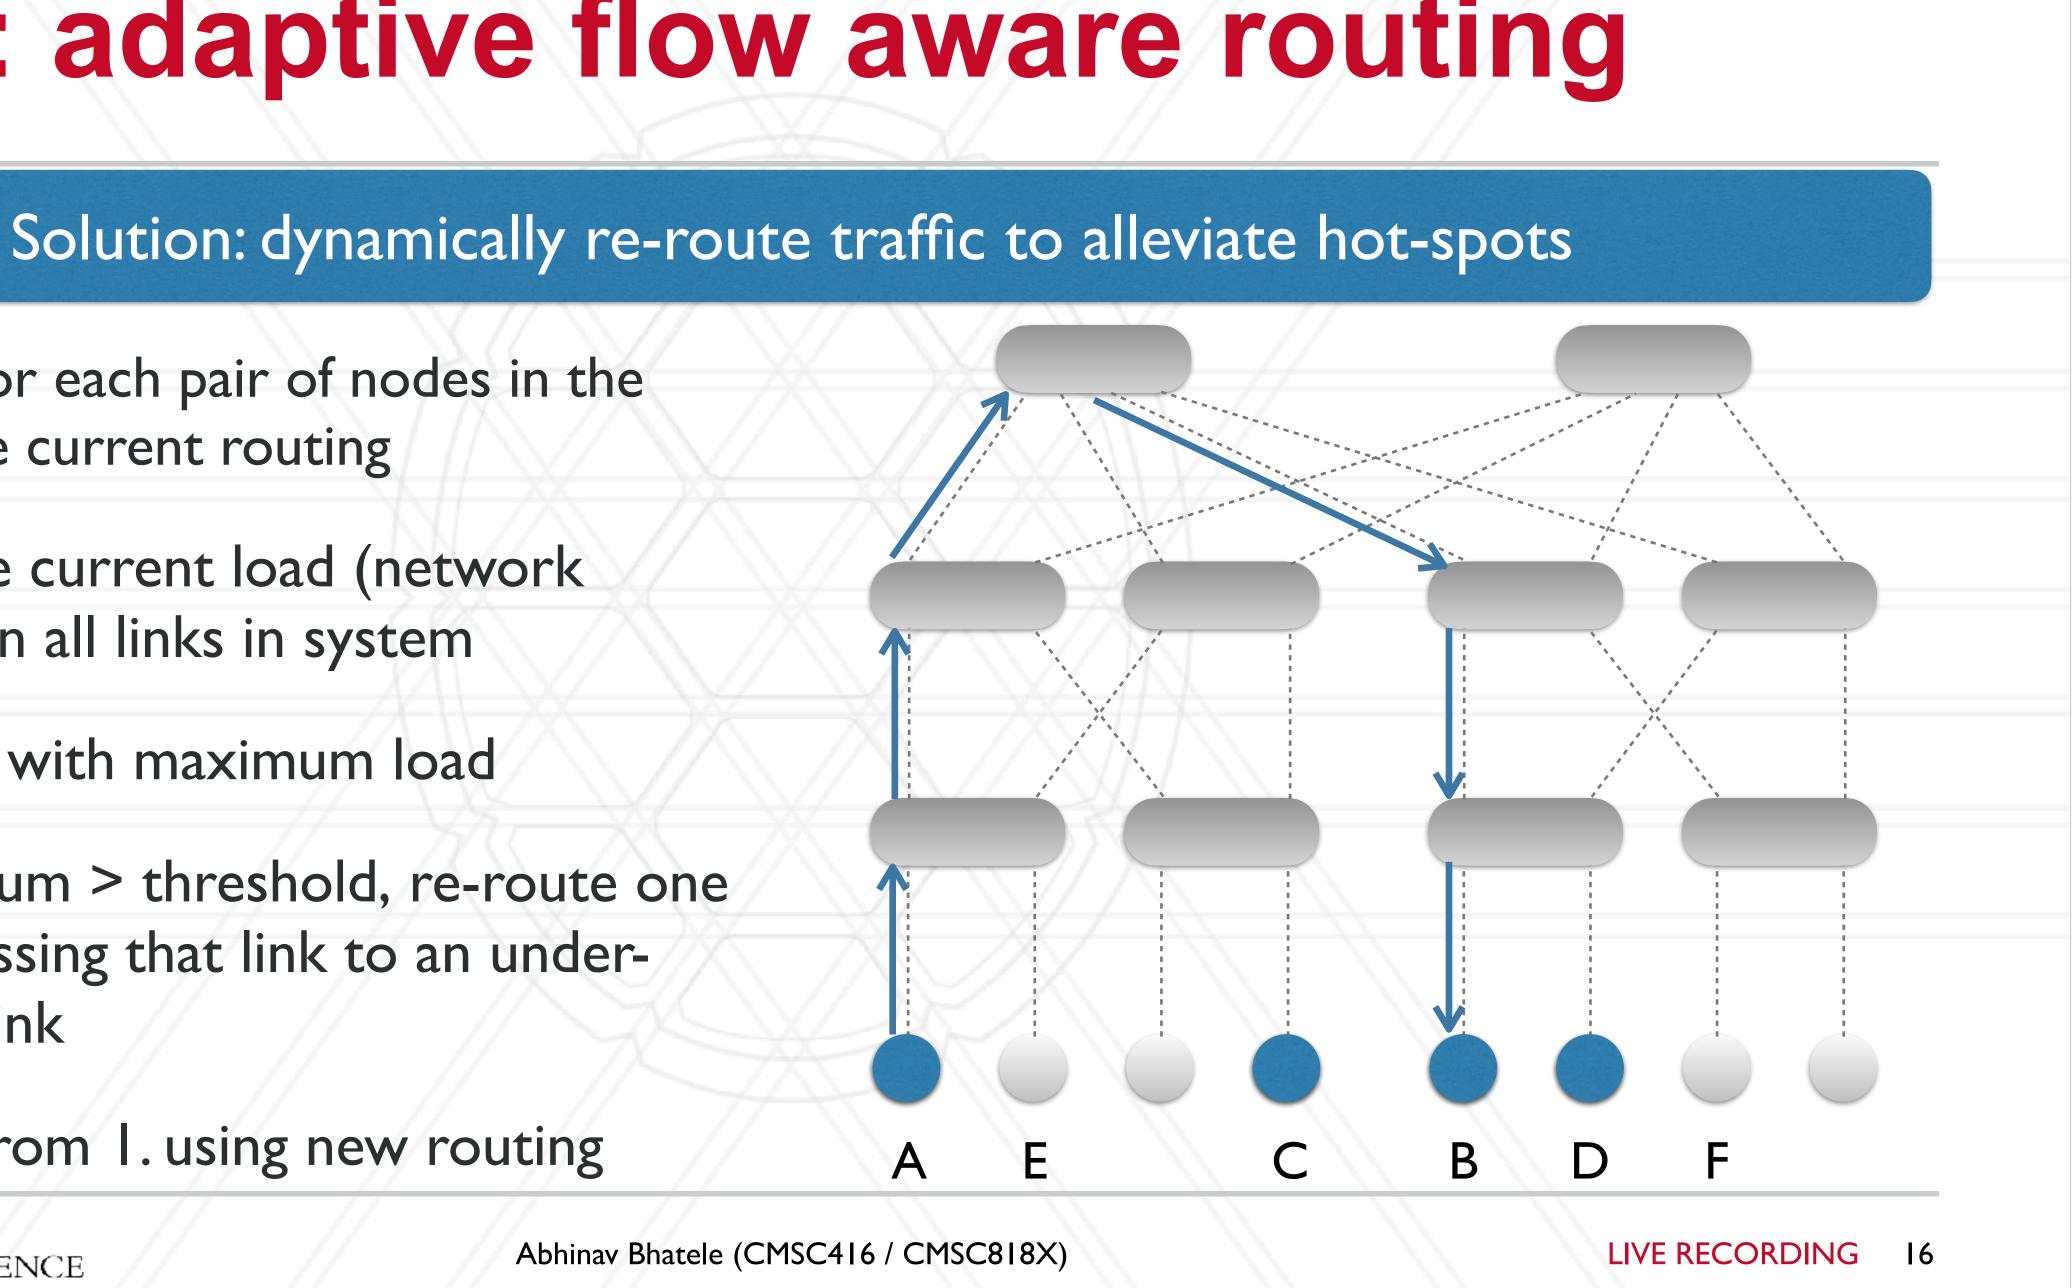

- I. Calculate current load (network traffic) on all links in system
- 2. Find link with maximum load
- 3. If maximum > threshold, re-route one flow crossing that link to an underutilized link
- 4. Repeat from 1. using new routing

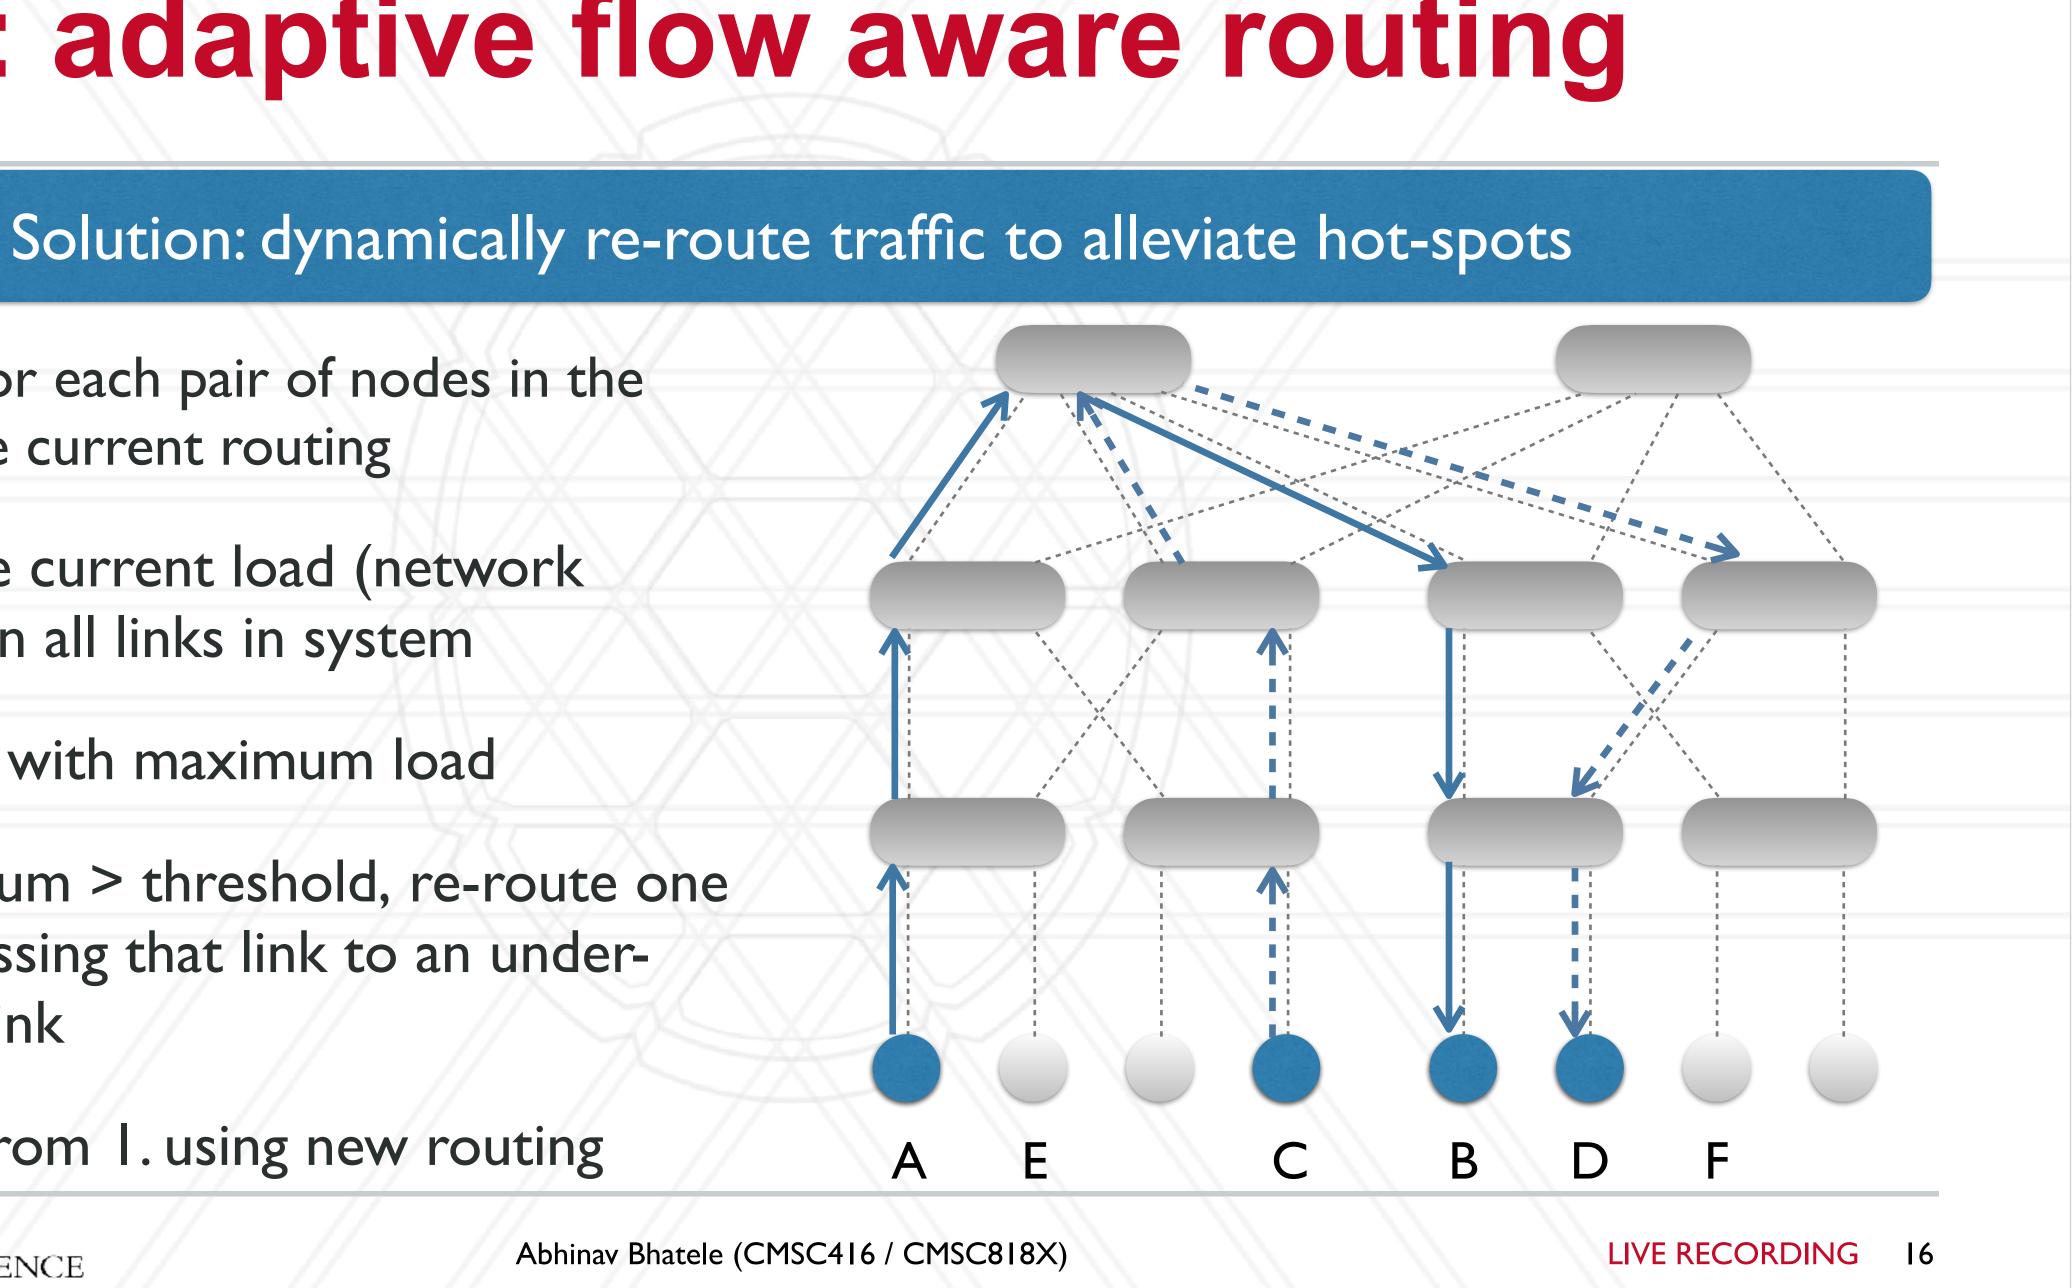

- I. Calculate current load (network traffic) on all links in system
- 2. Find link with maximum load
- 3. If maximum > threshold, re-route one flow crossing that link to an underutilized link
- 4. Repeat from 1. using new routing

Given: traffic for each pair of nodes in the system and the current routing

- I. Calculate current load (network traffic) on all links in system
- 2. Find link with maximum load
- 3. If maximum > threshold, re-route one flow crossing that link to an underutilized link
- 4. Repeat from 1. using new routing

Solution: dynamically re-route traffic to alleviate hot-spots

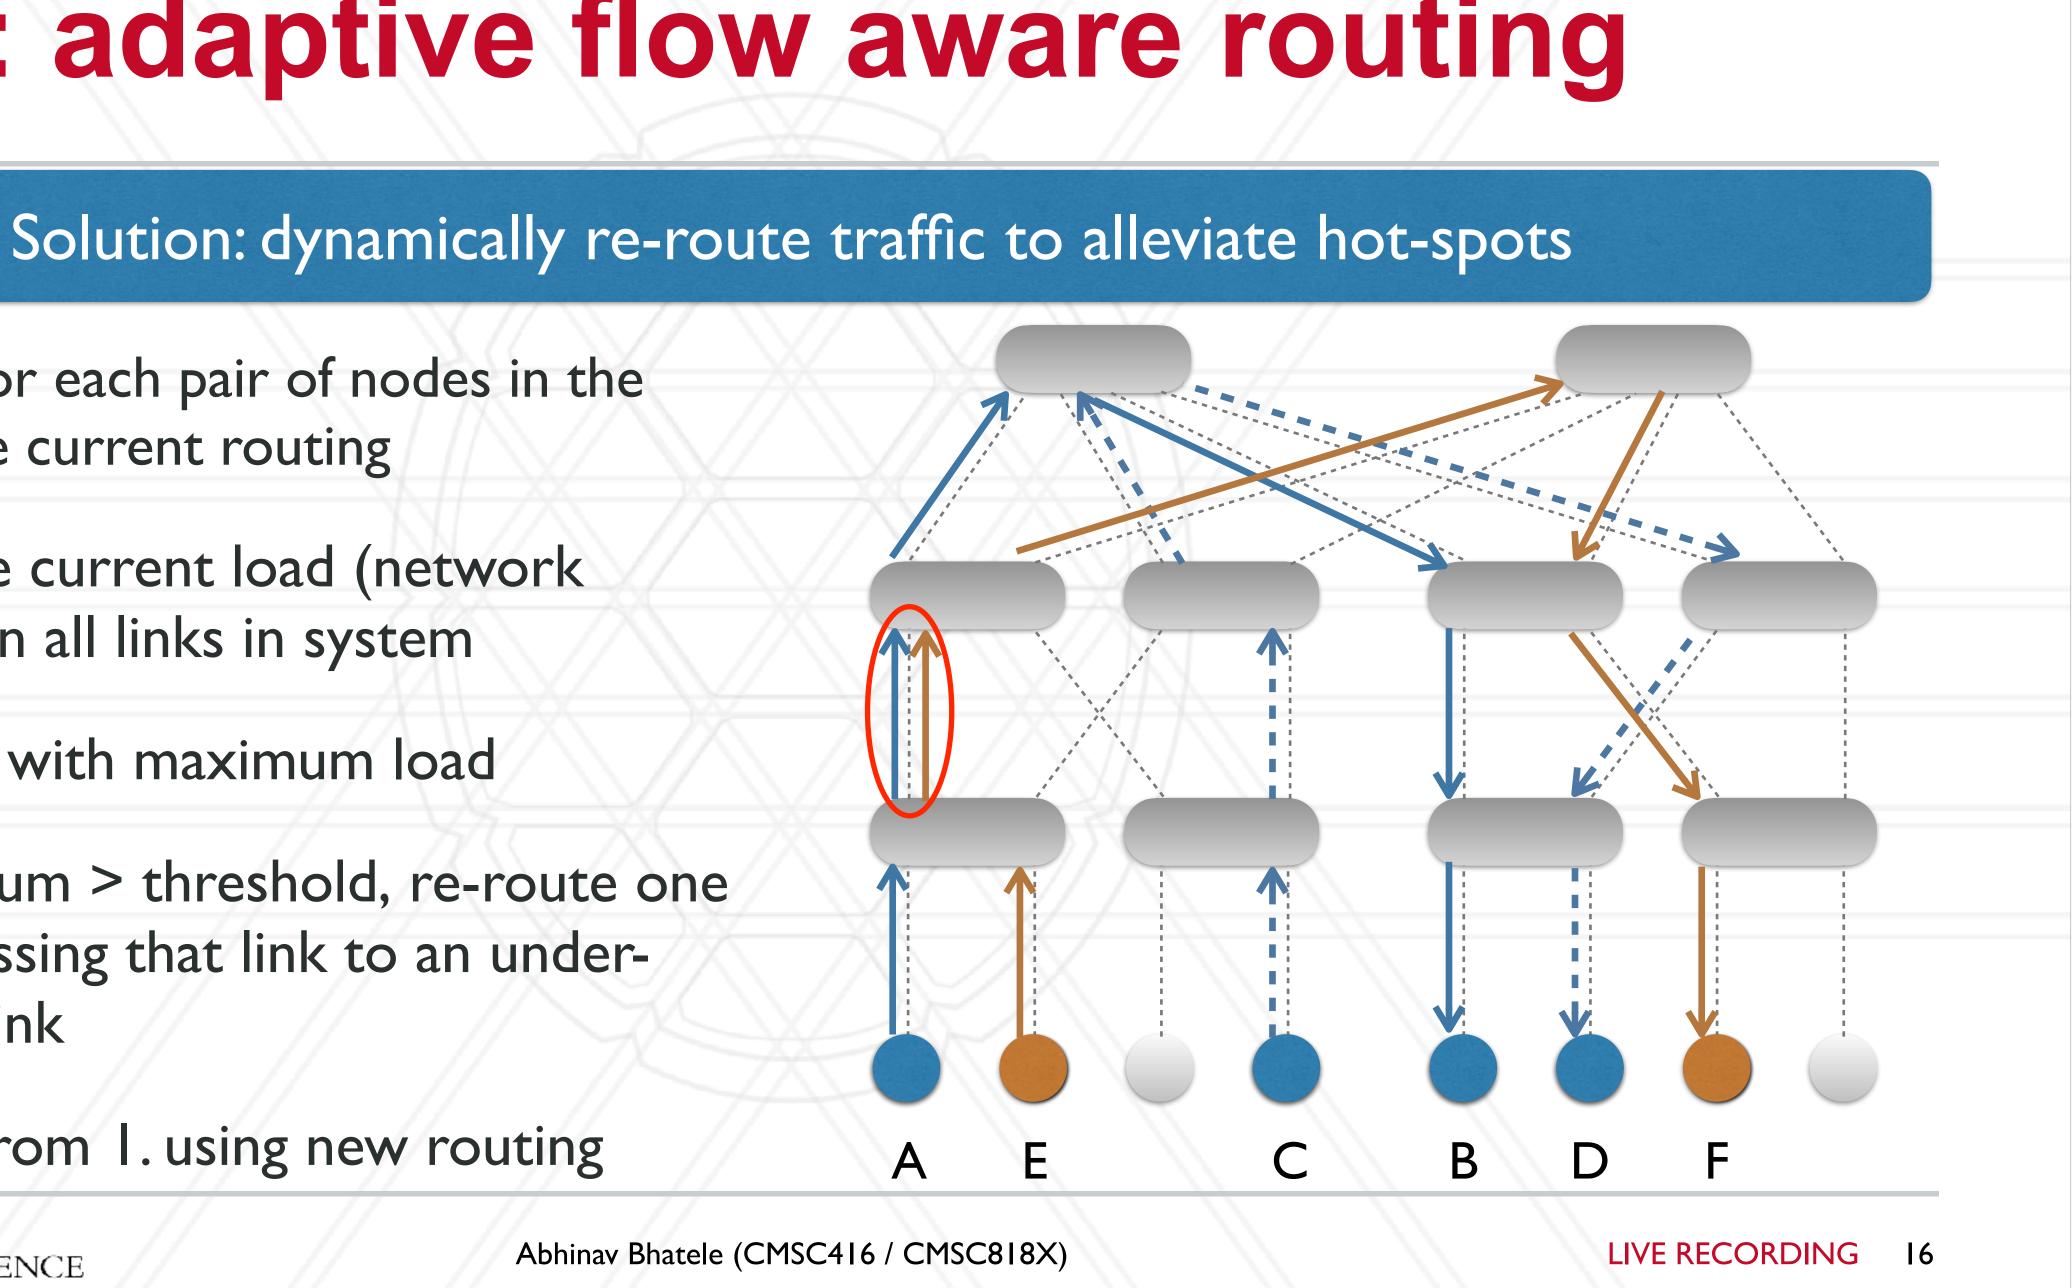

Abhinav Bhatele (CMSC416 / CMSC818X)

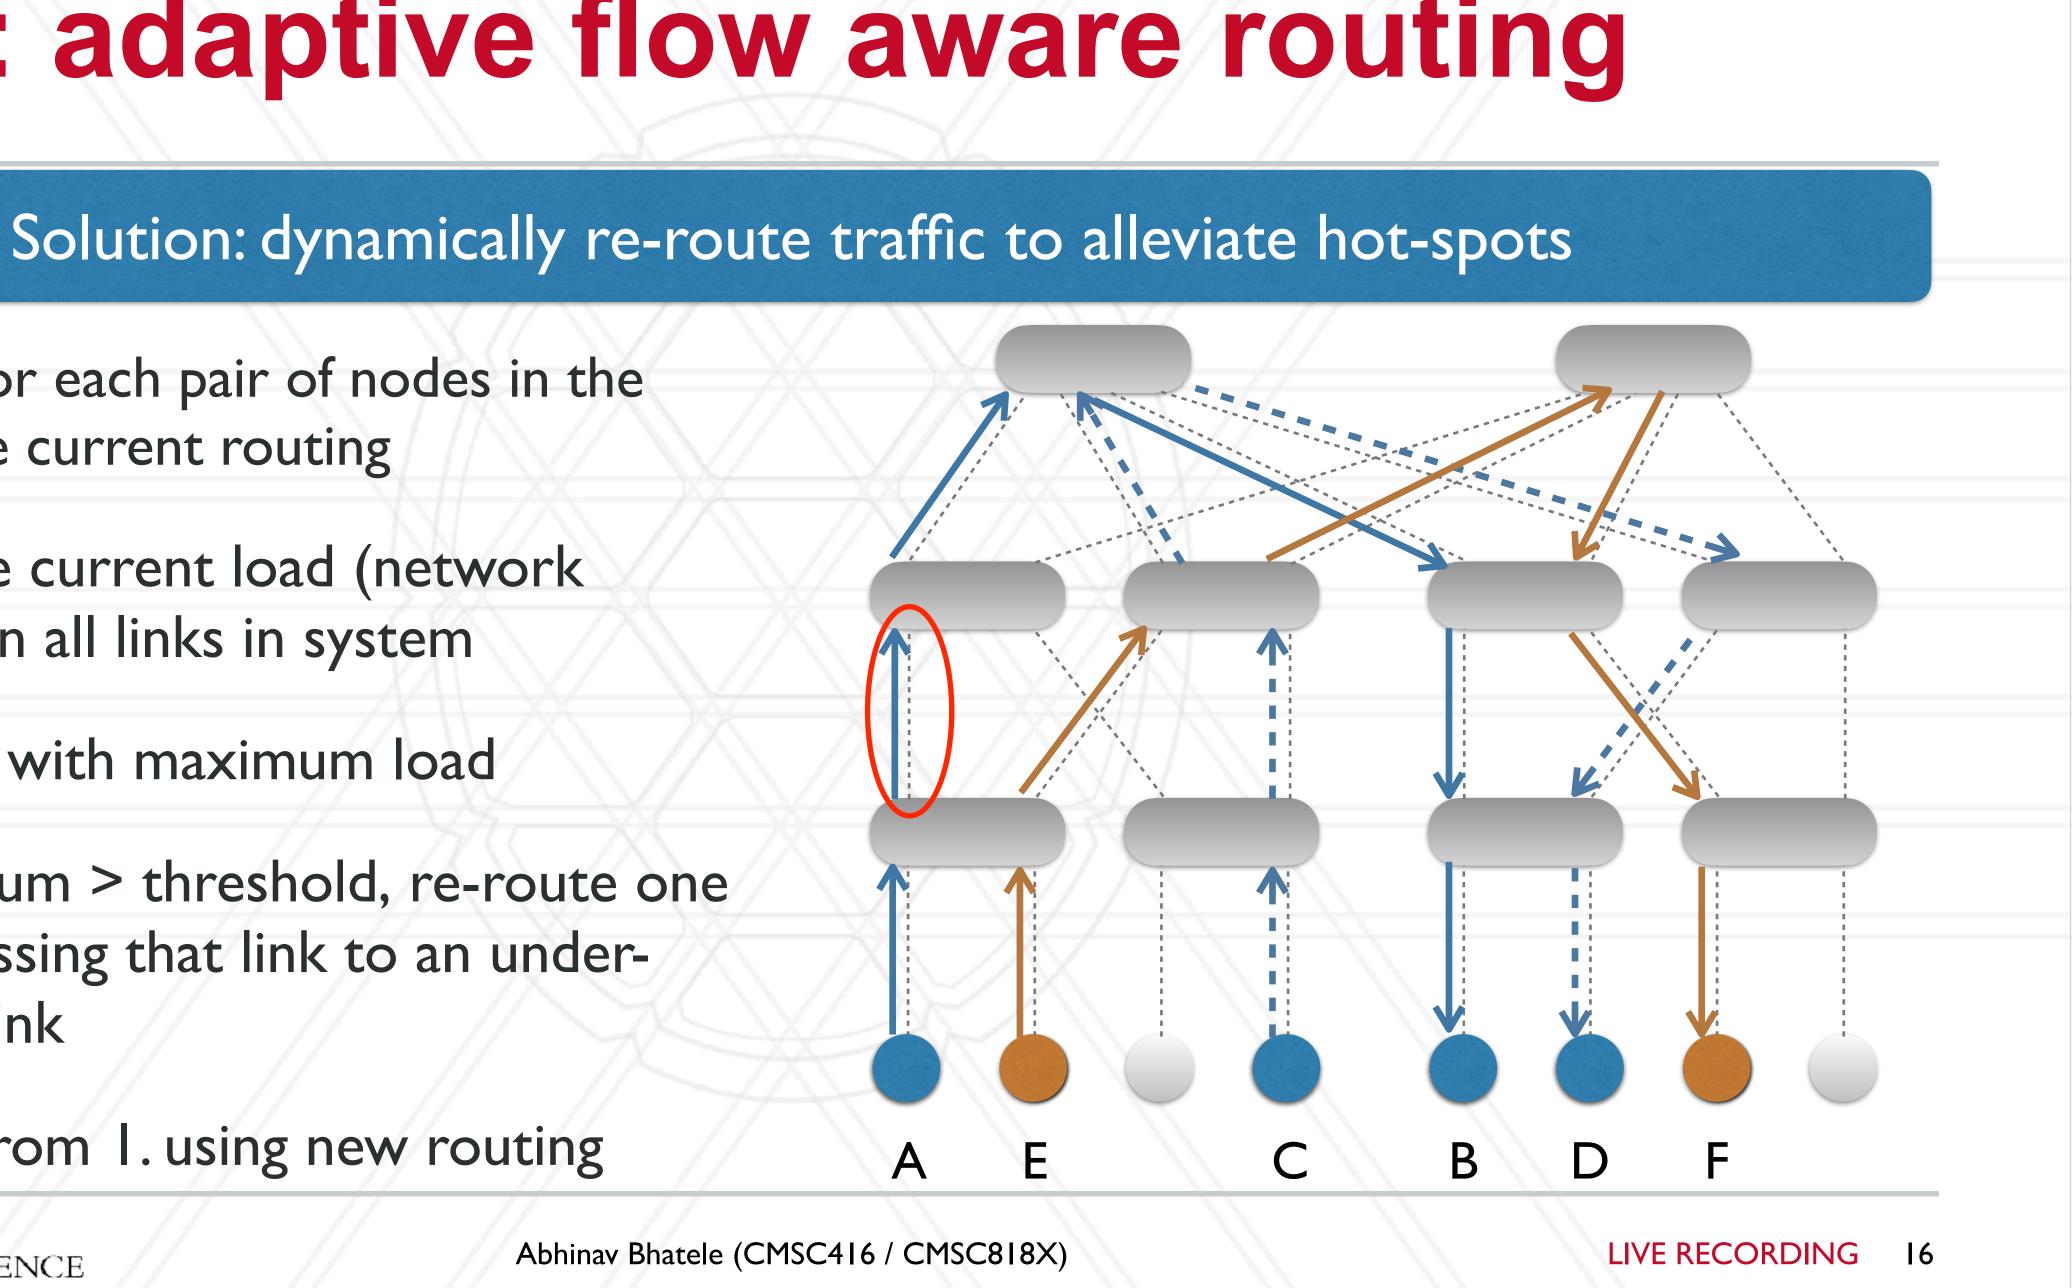

- I. Calculate current load (network traffic) on all links in system
- 2. Find link with maximum load
- 3. If maximum > threshold, re-route one flow crossing that link to an underutilized link
- 4. Repeat from 1. using new routing

- 2. Find link with maximum load
- 3. If maximum > threshold, re-route one flow crossing that link to an underutilized link
- 4. Repeat from 1. using new routing

Topology-aware mapping

- Within a job allocation, map processes to nodes intelligently
- Inputs: application communication graph, machine topology
- Graph embedding problem (NP-hard)
- Many heuristics to come up with a solution
- Can be done within a load balancing strategy

Abhinav Bhatele (CMSC416 / CMSC818X)

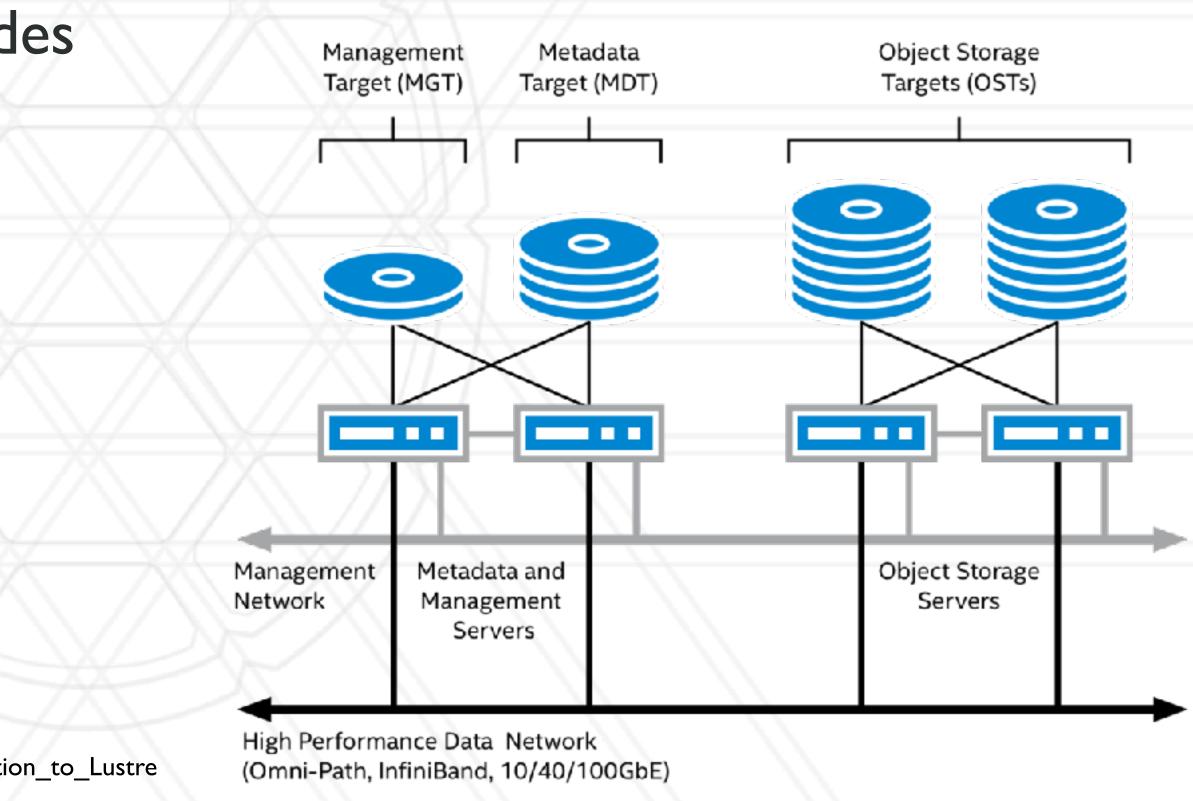

Parallel filesystem

- Home directories and scratch space are typically on a parallel file system
- Mounted on all login and compute nodes
- Also referred to as I/O sub-system

http://wiki.lustre.org/Introduction_to_Lustre

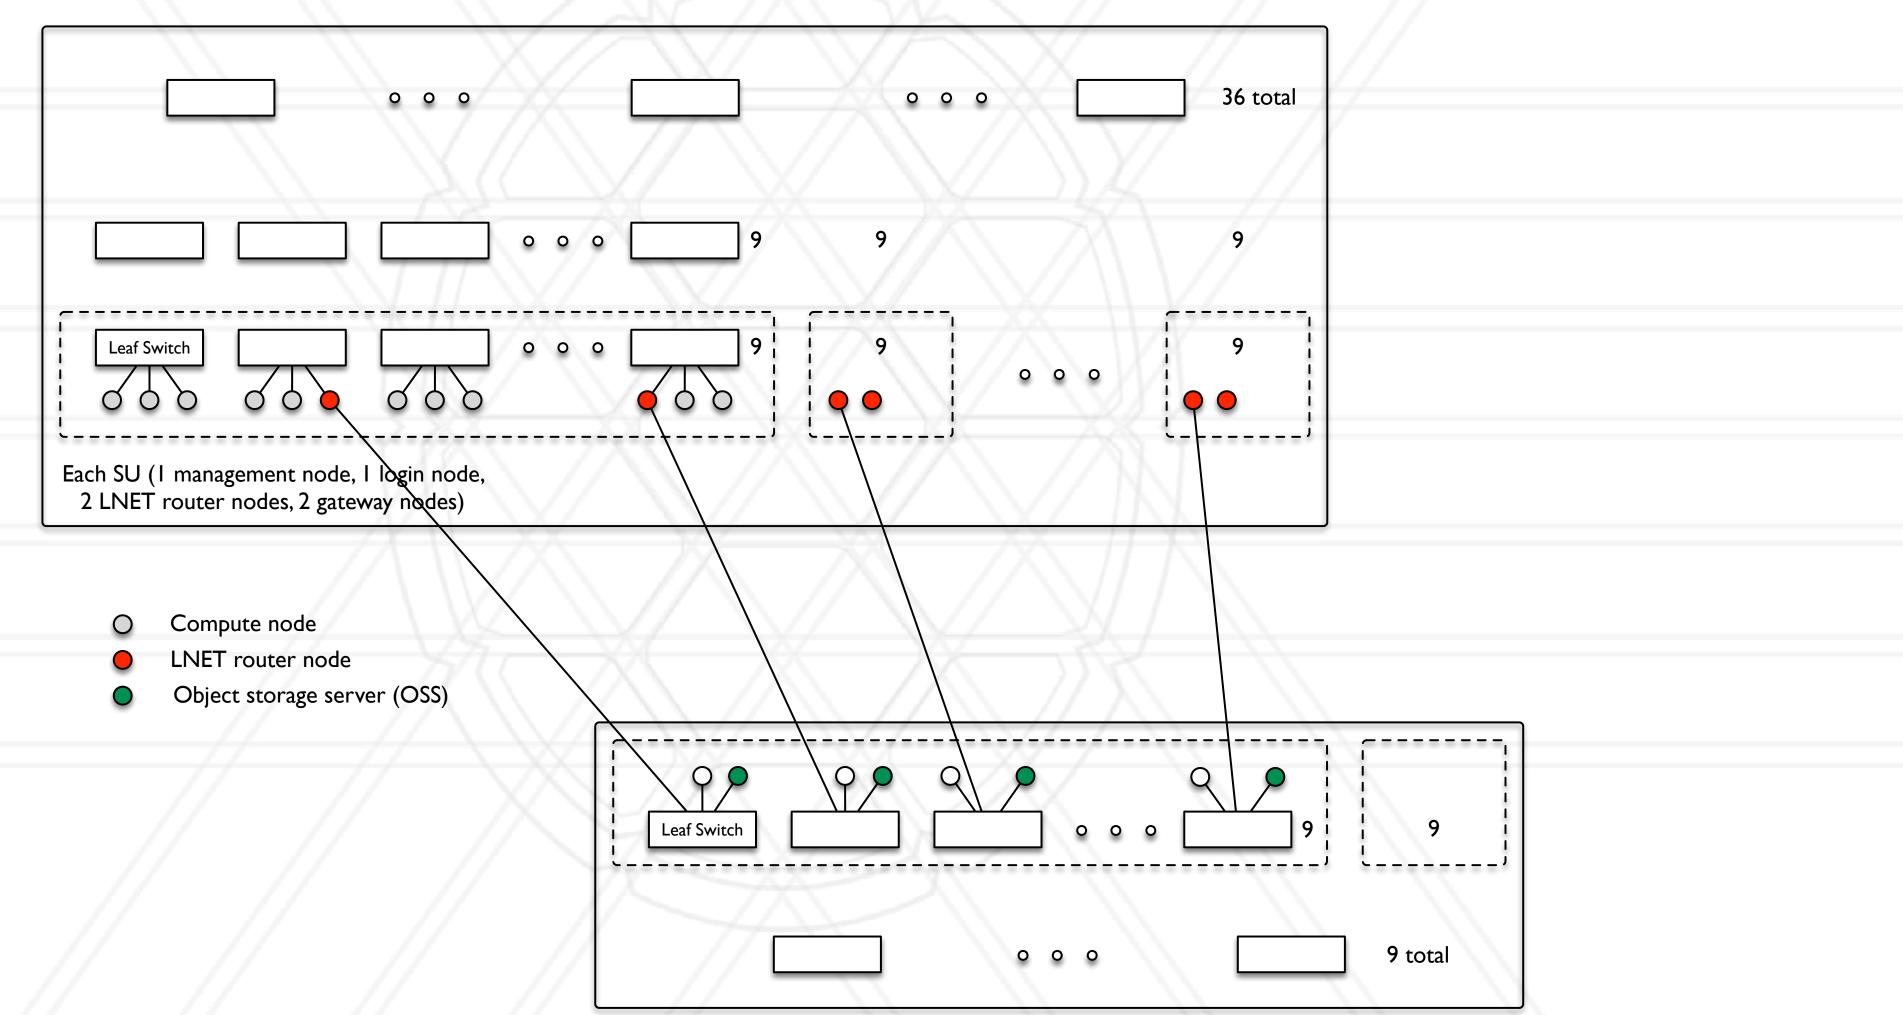

Abhinav Bhatele (CMSC416 / CMSC818X)

Links between cluster and filesystem

Abhinav Bhatele (CMSC416 / CMSC818X)

Different parallel filesystems

- Lustre: open-source (lustre.org)
- GPFS: General Parallel File System from IBM, now called Spectrum Scale
- PVFS: Parallel Virtual File System

Abhinav Bhatele (CMSC416 / CMSC818X)

Tape drive

- Store data on magnetic tapes
- Used for archiving data
- Use robotic arms to access the right ta <u>eWDuEo-3Q</u>

Abhinav Bhatele (CMSC416 / CMSC818X)

• Use robotic arms to access the right tape: <u>https://www.youtube.com/watch?v=d-</u>

Burst buffer

- Fast, intermediate storage between compute nodes and the parallel filesystem
- Two designs:
 - Node-local burst buffer
 - Remote (shared) burst buffer

Abhinav Bhatele (CMSC416 / CMSC818X)

I/O libraries

- High-level libraries: HDF5, NetCDF
- Middleware: MPI-IO
- Low-level: POSIX IO

Abhinav Bhatele (CMSC416 / CMSC818X)

Different I/O patterns

- One process reading/writing all the data
- Multiple processes reading/writing data from/to shared file
- Multiple processes reading/writing data from/to different files
- Different performance depending upon number of readers/writers, file sizes, filesystem etc.

Abhinav Bhatele (CMSC416 / CMSC818X)

I/O profiling tools

• Darshan

- Lightweight profiling tool from Argonne National Lab
- Recorder
 - Research prototype from UIUC
