

Project 5

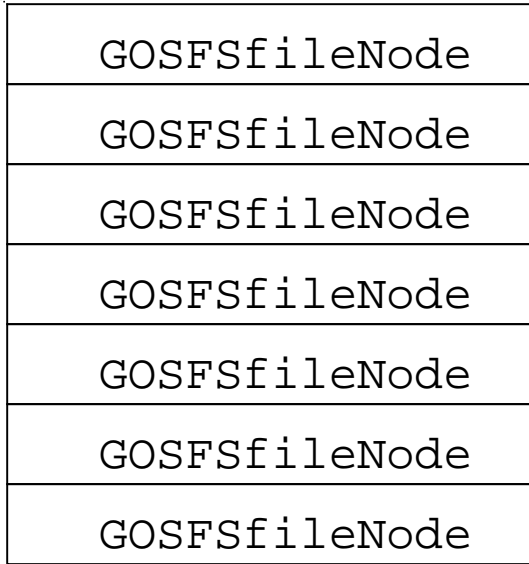

Logical layout of the disk

SUPERBLOCK					REST OF THE DISK
4KB					32 MB-4KB
4 bytes	4 bytes	4 bytes	1024 bytes	4KB-1036 bytes = 3060 bytes	32 MB-4KB
Magic	Root Dir Pointer	Size	Free Blocks Bitmap	Free	Data (Not allocated blocks or blocks allocated to directories/files)

Directory Entry

MAX_FILES_PER_DIR

Directory Block

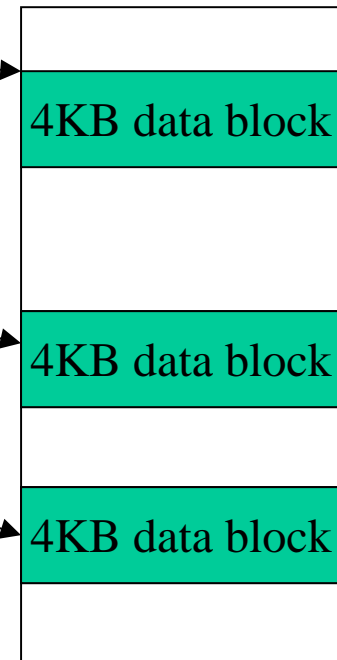

Directory

Data storage –Direct Mapping

GOSFSfileNode.blocks[10]

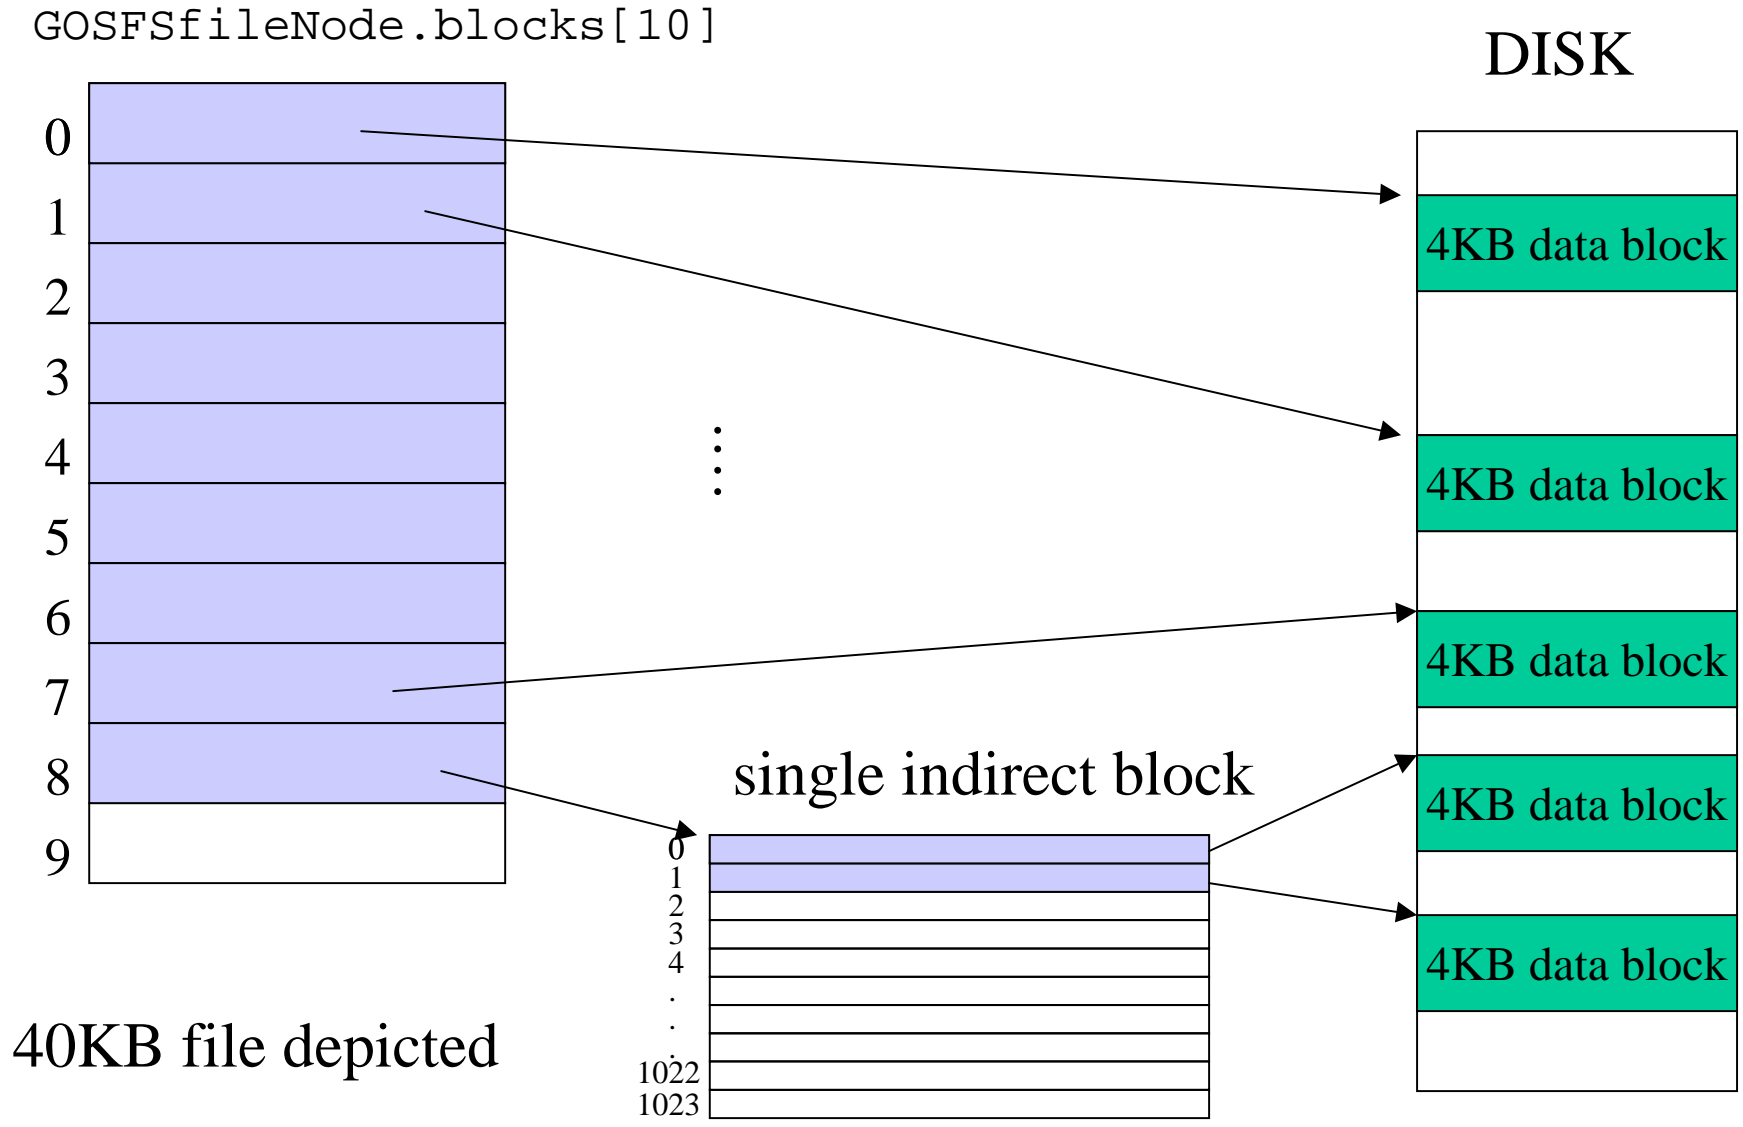

DISK

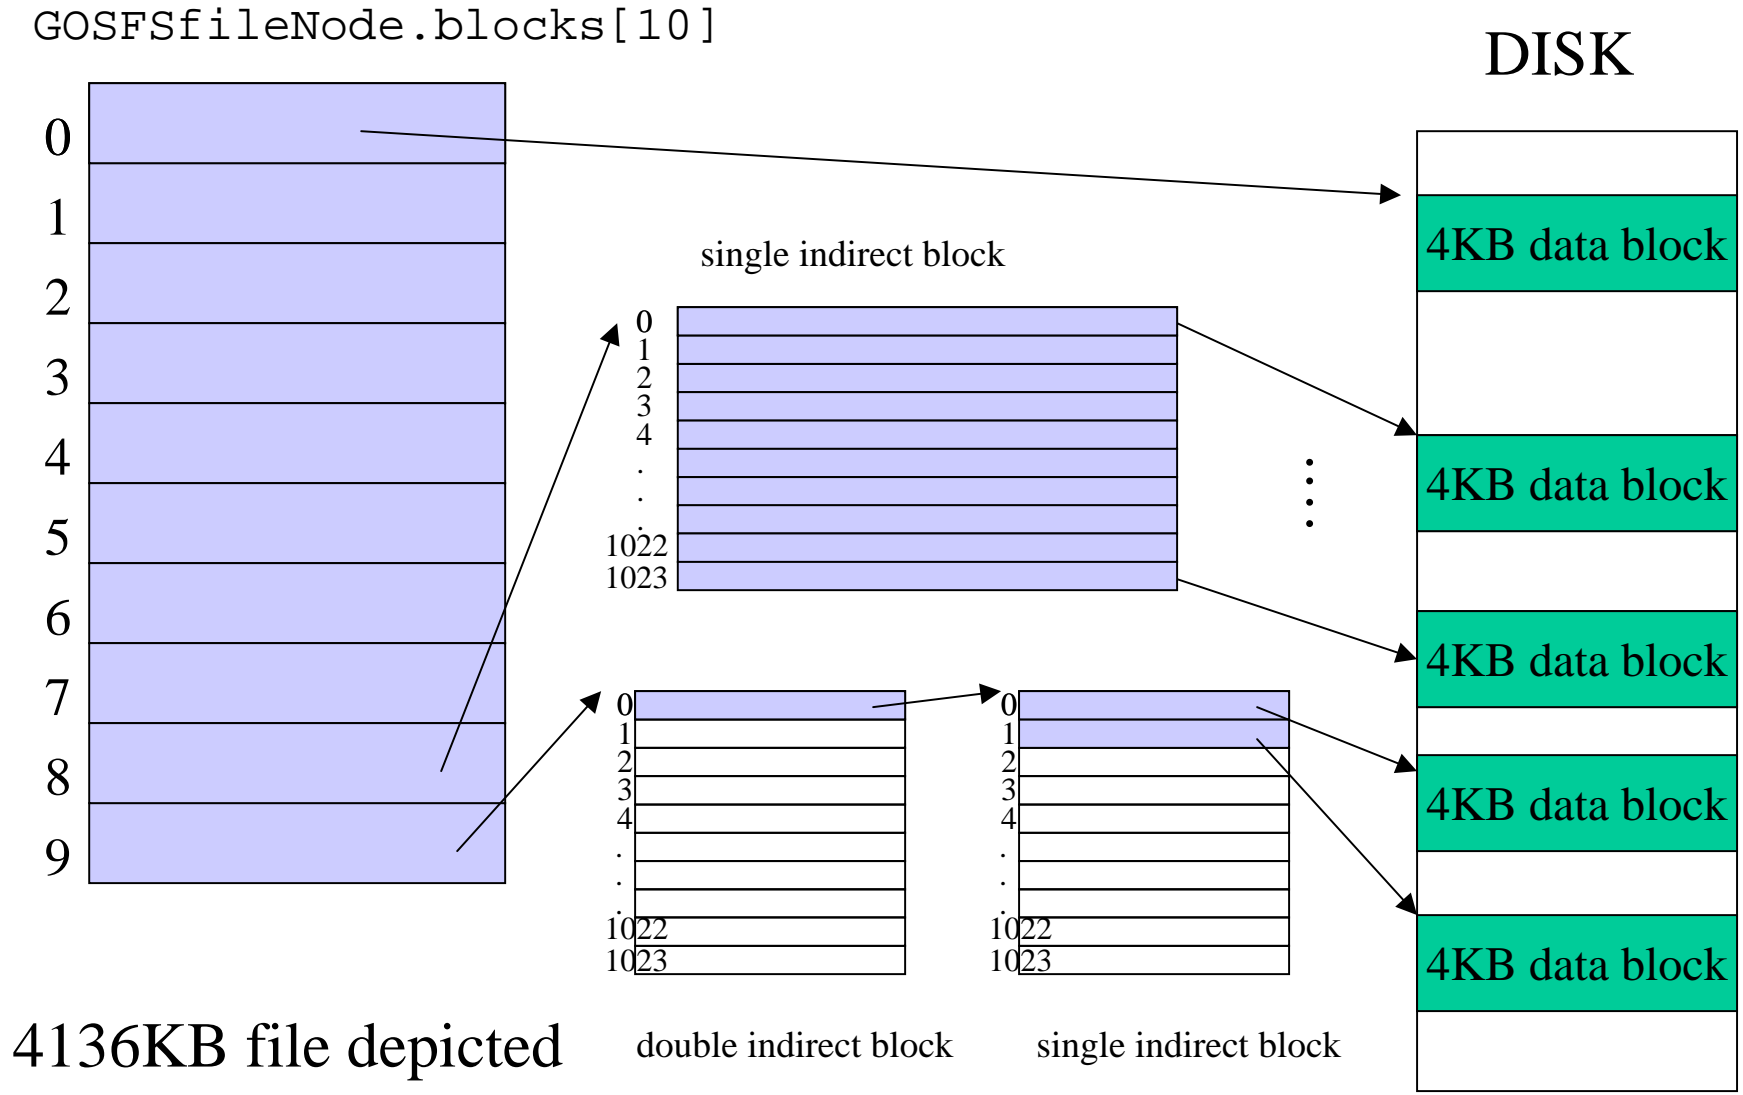

= used

12KB file depicted

Data storage –Single Indirect

Data storage –Double Indirect

Data storage - overview

- [0,32KB] – use direct mapped blocks only
- (32KB,4128KB] – use direct mapped blocks + single indirect blocks
- (4128KB,32MB] – use direct mapped blocks + single indirect blocks + double indirect blocks

Mount

- **SYS_MOUNT**
 - `Mount(char *name, int drive, char *fstype)`
- Make sure it works, so that we can test the rest of your project

- **SYS_OPEN**

- `Open(char *name, int permissions)`

- `openFile.mode :`

- `O_CREATE|O_READ|O_WRITE`

- `openFile.fsType :`

- `FS_TYPE_NONE` free slot

- **SYS_CLOSE**

- `Close(int fd)`

- **SYS_DELETE**

- Delete(char *name)

- If directory and not empty, forbid !

- **SYS_READ**

- `Read(int fd, char *buffer, int length)`
- Watch out return value !

- **SYS_WRITE**

- `Write(int fd, char *buffer, int length)`
- Not allowed for directories; use `Open(,O_CREATE)` or `CreateDirectory` instead
- “Grow on write” - allocate blocks “on the fly” if past end of file
- Synchronous

- **SYS_READ/SYS_WRITE** increase the offset with `#bytes read/written`

- **SYS_STAT**

- `Stat(int fd, fileStat *stat)`

- Simply copy verbatim from `GOSFSfileNode`

- **SYS_SEEK**

- `Seek(int fd, int offset)`

- Implement only absolute semantics for *offset*

- Not allowed to past end of file

- **SYS_CREATEDIR**

- CreateDirectory(char *name)

- Should work recursively

- CreateDirectory("/d/d1/d2/d3/d4");

- **SYS_FORMAT**

- Format(int drive)

- Disk Layout

- Don't have to do it in init

- Only for GOSFS
