## Interconnection Network

# IMPACT-3D

- HPF Code
  - Uses data distribution in one dimension
- Vector Code
  - Uses inner most array dimension
- Achieves 14.9 Tflops (45% of peak)
- Got 39% of peak using traditional HPF
  - 45 lines of directives
  - 1,334 lines of executable code

# Sisal

- Functional Language
- Uses Do-access style parallelism
  - Has software for remote access to global variables

```
type OneDim = array [ real 1;
type TwoDim = array [ OneDim 1;
function generate( n : integer
                    returns TwoDim, TwoDim )
for i in 1, n cross j in 1, n
    t1 := real(i) * real(j);
    t2 := real(i) / real(j)
returns array of t1
        array of t2
end for
end function % generate
```

# Sisal Performance Study

- Very Few Nodes
- No Absolute Performance
- No Comparison with other languages
